BRIXMENT
for Perfect Mortar

Uniformity
The use of BRIXMENT is the architect's assurance that all mortar will be uniform in strength and color and that his specifications will be accurately followed. When oversanded, BRIXMENT mortar works short and, since there is no lime in the mix, the necessary plasticity can be secured only by using the proper amount of BRIXMENT.

Strength
The strength of BRIXMENT mortar is greater than that required by the building code of any city for the heaviest load-bearing walls. Its strength increases with age. Its final strength is greater than that of the brick itself.

Test by Robert W. Hunt & Company

Bond
BRIXMENT makes a stronger, tighter bond between the brick and the mortar. It is ground finer and hardens more slowly than portland, thus permitting deeper penetration and a more thorough keying into the pores of the brick.

For Walls Below Grade
BRIXMENT is a true hydraulic cement. This, with its water-resistance and freedom from lime, makes it ideally suited for walls below grade.

Complete Information on BRIXMENT *for Mortar*

JUST off the press and yours for the asking—a new, concise, sensibly prepared handbook giving all the advantages of BRIXMENT mortar for brick, tile and stone masonry.

Uniformity of strength and color, bonding qualities, adaptability to winter use and work below grade, analysis, tests, estimating data, specifications—these are some of the subjects treated. Also partial list of well-known BRIXMENT buildings with names of architects and contractors.

TRADE "LEADITE" MARK

Registered U. S. Pat. Office

Only 51 days between the decision to build an emergency water works plant - - *and the finished job!*

- - the speed with which Leadite jointing can be accomplished contributed to this remarkable feat.

THE line illustrated here is 26,000 ft. of 12" pipe with LEADITE joints.

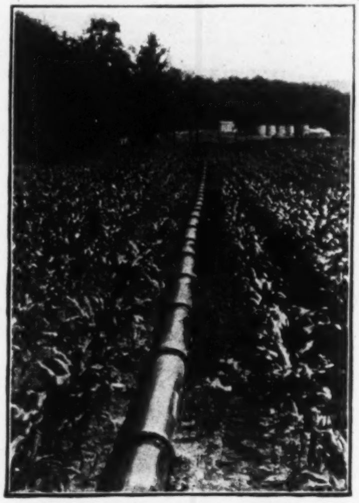
Owing to the emergency which arose in the city for which the installation was made no trenching could be attempted.

The line lies throughout its entire length on the surface of the ground without any bracing except at the bends.

After completion the line was tested to 260 lbs. pump pressure.

Specify and use LEADITE —it saves at least 75%

It is now under constant pump working pressure of 230 lbs. For over 30 years now, LEADITE has demonstrated by test and experience that it is absolutely permanent and secure.



Part of the 26,000 ft. installation, crossing an open field. Chas. E. Waddell & Co., Engineers.

Leadite is self-caulking and is so simple to use that the method of using it can be taught to even the most inexperienced help in a very short time.

Added to its speed and ease of use—Leadite saves at least 75% on account of saving in material and labor.

Be sure it is LEADITE and accept no imitations~~~

The pioneer self-caulking material for c. i. pipe.
Tested and used for over 30 years.

THE LEADITE COMPANY . . Land Title Building . . PHILADELPHIA, PA.

Independent

Reinforced Concrete Pipe

Will Best Meet Your Sewer Requirements
Low Cost, Easy to Lay—Strong—Permanent

FOR that new storm or sanitary sewer, you demand a material that is strong, durable, economical, and *proved* in sewer service. And naturally, you want to get the sewer built at the lowest possible cost.

INDEPENDENT Reinforced Concrete Pipe meets your objectives better than any other sewer material. It is strong and durable—combines the strength of steel with the permanency of concrete. It is low in first cost—built near the job in a special pipe plant; inspected, tested and cured under expert supervision.

It is easy to lay in *any* trench—"Recessed" joints facilitate sealing and insure tightness. It is highly efficient—provides free flow and maximum carrying capacity. It requires little or no upkeep, and it is backed by a long and successful service record in numerous American cities, and by the largest concern in the country specializing in building reinforced concrete sewer pipe.

Our sizes, prices, service facilities, and other engineering data will interest you. Write or wire.

ENTHUSIASM THAT COMES FROM SERVICE

"THIS machine does not owe us a cent. It is a wonder and can do all the jobs we want it to do," says an enthusiastic user of INDUSTRIALS.

We have scores of testimonials of this nature which indicate the satisfaction users are getting from INDUSTRIALS. But a real appreciation of what INDUSTRIALS will do can only come from their application to your work.

The savings in cost, increased production and low maintenance means much more when you are benefiting from the advantages of this sturdy but flexible crawler.

Our catalog contains detailed information and we will be pleased to send you one or to have our engineer call and go over your particular problems. Write.

How to Save on the Final Cost of Wood Floor Finishing

LIGNOPHOL

Costs 1½ Cents* per ☐ foot of floor space

* *including labor*

Other methods cost

from 3 to

5 Cents per ☐ foot of floor space

THE charts above show the first cost of wood floor finishes. Including labor cost, Lignophol is from 50% to 75% lower than staining and shellacing (or varnishing).

As Lignophol is easily applied with a long-handled brush the labor cost is reduced to the minimum. The material alone costs but 1 cent per square foot.

The U. S. Forest Products Service says linseed oil does not protect. Shellac and varnish are surface treatments only and wear off.

Lignophol penetrates the wood, filling the cells and fibres and producing smooth, hard and dustless floors that last for years.

Lignophol is furnished in four standard colors: Natural; (for preserving the natural beauty of a new floor), Light Brown, Medium Brown and Dark Brown (for improving appearance of older floors).

Be sure to use Lignophol—the great life saver for wood, and save expensive floors (new or old) from splintering, rotting, or drying out. THE FIRST COST IS THE ONLY COST!

Other Sonneborn Life Savers for Buildings

LAPIDOLITH

The original concrete floor hardener. Adds years to the life of concrete floors. This liquid chemical compound is applied like water, with a brush. Hardens overnight. Does away with dust and cracks.

CEMCOAT

This paint stays white when others turn yellow. Can be washed again and again. Adheres to brick or concrete as easily as wood. Send for samples.

HYDROCIDE

A complete line of water and dampproofing products for walls, copings, foundations.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Eliminating Repairs and Maintenance Costs

TRENTON WATER WORKS, Trenton, N. J., has been using Leadite for making joints in c. i. bell and spigot water mains for a great many years with entire satisfaction.

They have laid nearly 75 miles of c. i. pipe of various sizes with Leadite joints.

Trenton has very good paved streets and they have never had to dig up a Leadite joint for repairs during all the time they have been using Leadite. They consider this excellent performance for Leadite joints.

They find the use of Leadite has reduced to a minimum repairs and maintenance costs.

Trenton Water Works has always found Leadite joints efficient and economical.

They keep a check on their distribution system by water waste surveys.

During the severe winter of 1917-18 Trenton Water Works had over 2000 frozen services. Many of these services were connected to mains laid with Leadite joints. They had no difficulty in thawing, with electrical apparatus, services connected with mains which were laid with Leadite joints.

Mr. Alvin Bugbee is Superintendent of the Trenton Water Works.

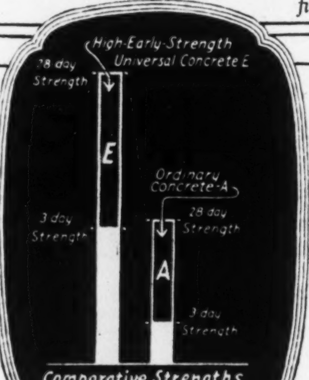
Especially Well Adapted to ROAD and STREET work

While *High-Early-Strength* Universal Concrete may be made as workable as desired and used on *all types* of jobs, the need for time-saving in construction of roads and streets makes it particularly adaptable for this field. Here are typical examples of how *High-Early-Strength* Universal Concrete has helped to prevent or shorten detour periods.

Conditions	Solution
Because *East Stratton Street, Logan, W. Va.*, is used by 5000 automobiles each day, the officials wished to give the public earliest possible use of the new pavement.	The builder used *High-Early-Strength* Universal Concrete. Sections were opened to traffic *3 days* after placing.
At *La Grange Park, Ill.*, a change of grades was necessary at three busy intersections. Each day's delay meant time-loss to hundreds of motorists.	Intersections were paved with *High-Early-Strength* Universal Concrete on *Tuesday* and opened to traffic early *Saturday* morning.
Michigan Street, Duluth's heaviest traveled business street had to be re-paved. Specifications permitted its being opened to heavy traffic only after the concrete had developed a compressive strength of *2000* lbs. per square inch.	*High-Early-Strength* Universal Concrete was used. Thirty-eight tests showed an average strength of *2130 lbs.* at *4 days* when the street was opened. A 10-day detour period was avoided.
Five days before the scheduled opening of the new *Sioux City-Le Mars, Iowa*, highway, paving was begun on the intersection that joins the road to the city.	*High-Early-Strength* Universal Concrete was used for the intersection and it and the highway were opened as scheduled. Three thousand automobiles passed over the intersection on the opening day—*five days* after the concrete was placed.



High-Early-Strength Universal Concrete is made by using fully tested methods with the usual materials, usual labor, usual equipment, and standard—not special—Universal cement. At *3 days* its strength is equal to the strength of ordinary concrete at *28 days*, and in addition it also has a higher *ultimate* strength, and therefore is *permanently* better and stronger concrete. (See diagram.) For details, send in the accompanying coupon.

For surfacing concrete — quicker, better, and at less cost

Ingersoll-Rand Company has developed a new lightweight air tool for use in finishing the surfaces of concrete and stone.

This machine (known as Size 6G) will quickly and easily remove all form marks from concrete and prepare the surface for a flat finish or for painting. It is ideal for cleaning, smoothing, and finishing concrete walls, bridges, and buildings. It will surface either "green" or old concrete.

It saves time and labor and does a far better job than other devices. The machine weighs only 13¾ lbs. with wheel and is easy to handle in any position. Ask for complete information.

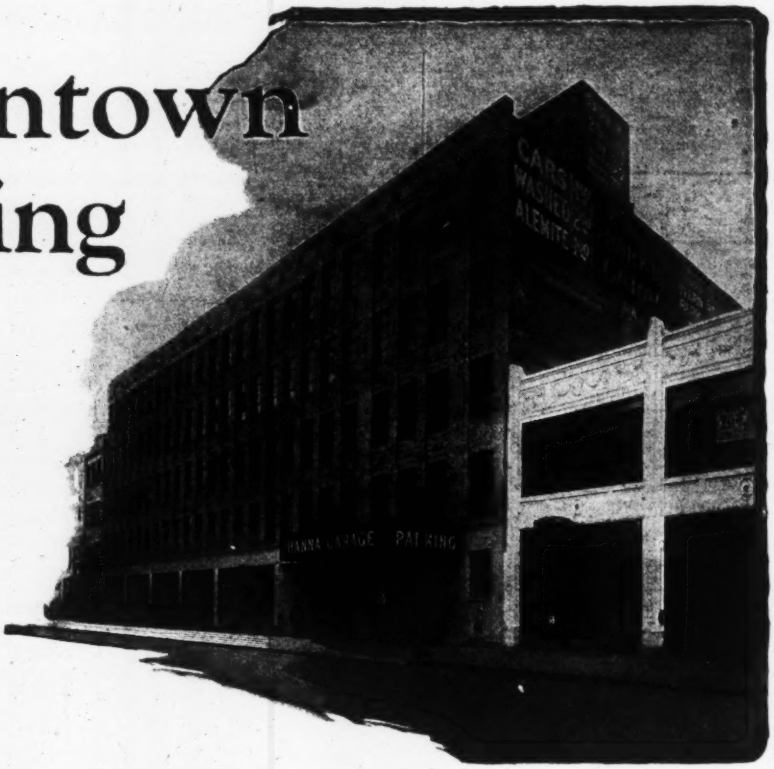
AMERICA NEEDS MORE GARAGES IN HER CITIES

Downtown Parking as a Business



Hanna Garage, Cleveland, Ohio, designed by Hadlow Hick Company, Architects—5 stories high and 400 cars capacity. d'Humy Motoramps for customer convenience and operating profit.

IT IS a BUSINESS! It came into being by popular demand and a means of self-protection for office building, hotel, department store and other business interests. In practically every city there are 10 cars for every curb parking space—even where curb parking is still permitted. Business and the public demand relief.

Above is pictured the business home of a garage enterprise brought into being to serve the parking needs centering around the Statler Hotel and adjacent office buildings, and their customers.

Have realty and business men in your city taken the same forward step in all the places necessary? Then—take a copy of our "Building Garages for Profitable Operation" and start the ball rolling.

Or—if preliminary plans are under way—let us sketch-plan a miniature floor plan layout of maximum storage capacity. That is our free service to architects.

$30,000,000 SAVED!

The American Institute of Steel Construction has already contributed to modernizing the building codes of more than a hundred cities in this country and Canada. This has meant an estimated saving to builders, owners and taxpayers of more than $30,000,000 annually. The Institute enlisted the aid of America's ablest engineering talent in developing its Standard Specification for the design, fabrication and erection of structural steel for buildings. . . . This Specification is endorsed by such bodies as the A. S. C. E., the New York Building Congress, and the Pacific Coast Building Officials Conference. It supplements a Code of Standard Practice designed to obviate misunderstandings between the buyer and seller of structural steel. Send for copies of the Standard Specification and Code of Practice. There is no obligation. We will also send the valuable fact-book, "STEEL NEVER FAILS."

AMERICAN INSTITUTE OF STEEL CONSTRUCTION, INC

The co-operative non-profit service organization of the structural steel industry of the United States and Canada. Correspondence is invited. Address: Lee H. Miller, M. Am. Soc. C. E., Chief Engineer, 285 Madison Avenue, New York City.

"We're putting all our trucks on BUDD-MICHELIN Dual Wheels . . . . and saving money"

ANY fleet of 28 dump trucks is likely to be an expensive family. So the Western Gravel Company were hunting economy when they put their first truck on Budd Duals.

And they found it!

"Our first truck on Budd Duals went on the road in June, hauling two six-bag batches to the load—8400 pounds," says C. M. Fitch, president of the company.

"Budd Duals did the work so much better that by August we had seven trucks on them.

"We hope to soon have our entire fleet on Budd Duals, with one-size tires all around. Budd Duals have saved us money."

And Budd Duals will save *you* money, too—*six ways* . . .

(1) GREATER SPEED—more loads per day.

(2) BETTER TRACTION—fewer hold-ups in soft ground.

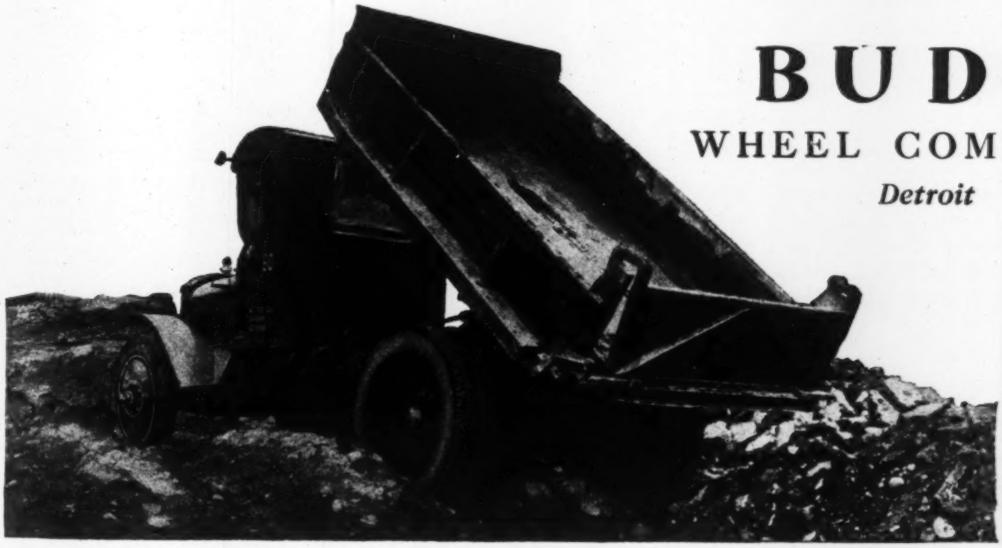
(3) LONGER TRUCK LIFE—thousands of miles of extra service from your trucks.

(4) LOWER REPAIR AND MAINTENANCE COSTS—from 25% to 50% lower.

(5) GREATER TIRE MILEAGE—from 15,000 to 20,000 miles to the set of tires because of positive alignment.

(6) ONE SIZE TIRES—and one size wheels, all interchangeable. One wheel service for the fleet.

If you're running a fleet of dump trucks, this difference in wheels can make a difference in your bids!



BUDD
WHEEL COMPANY
Detroit

YOU GET FROM 15,000 to 20,000 MILES from a set of tires on Budd Wheels—

Because Budd Duals *always* run true as an arrow—

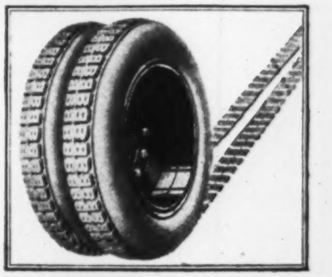
They can't get out of alignment to wobble and shimmy—

They have no demountable rims, no rim clamps—

So you can't get a tire on crooked, because correct mounting is not left to chance and driver.

This positive, *permanent* alignment is made possible by Budd Dual design.

POSITIVE PERMANENT ALIGNMENT



GREATER TIRE MILEAGE

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

"The World's Playground" has used Leadite with complete satisfaction for over 20 years

ATLANTIC CITY, New Jersey, is proud of its well-paved streets. In laying new or additional cast iron mains, the engineers always use Leadite. They know from the experience of nearly one-quarter of a century that Leadite joints are absolutely secure and that the occasion will not arise where paved streets have to be dug up to repair the line.

In addition to the mains under the paved streets, Leadite was used for jointing the 24" main that runs under the famous boardwalk.

Other lines run through salt marshes, over bridges and under numerous railroad tracks.

The sizes of these mains run from 4" to 48".

Mr. L. Van Gilder is Engineer and Superintendent of the Atlantic City water department.

Added to the security and permanence of Leadite joints there is a saving of 75%.

For its economy—permanence—security—and the speed with which jointing can be finished—Water Works men specify and use Leadite.

Laying 24" c. i. water mains, with Leadite Joints, in Atlantic City under paved street.

Specify and use LEADITE —it saves at least 75%

Be sure it is LEADITE and accept no imitations~~~

The pioneer self-caulking material for c. i. pipe.
Tested and used for over 30 years.

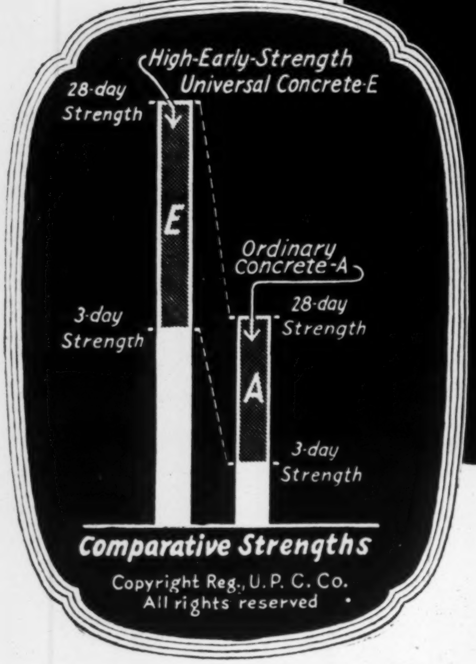
The Pick of the Labor Market
BUILDING SUPPLIES
Plentiful Materials Promptly Delivered
Months Earlier Return on the Investment
When time is money . . .
use High-Early-Strength concrete
made with standard (not special)
Universal Cement



Now It Is Even Easier to Gain These Advantages for Winter Work

Aside from keeping materials at a warm temperature, the principal requirement in cold weather concreting is to protect the work from freezing.

Because *High-Early-Strength* Universal Concrete is as strong at 3 *days* as ordinary concrete at 28 *days*, it shortens the period during which this protection is necessary, and hastens removal of forms.

And because *High-Early-Strength* Universal Concrete has a higher *ultimate* strength in addition to a higher *early* strength it is *permanently* better and stronger than ordinary concrete (as shown by the diagram).

High-Early-Strength Universal Concrete is made by using fully tested methods with the usual materials, usual labor, usual equipment, and standard—not special—Universal cement. For details send in the accompanying coupon.

Concrete for Permanence

Winter building keeps organization intact, takes advantage of plentiful labor and materials and assures completion of the job months earlier than would otherwise be possible. *High-Early-Strength* Universal Concrete makes winter building even more practicable than before. For details, send in the accompanying coupon.

Saves Money in Building Sewers

WHEN the engineer specifies INDEPENDENT Reinforced Concrete Pipe for a sewer project, the city is assured a permanent and efficient sewer, *built by the most economical method.*

The city saves money on material and helps local business. "INDEPENDENT" establishes a special pipe plant near the sewer site and uses local labor and materials, wherever possible. Inspection is facilitated, and delays in delivery are avoided.

Time and labor are saved in laying the sewer. The exclusive "Recessed" joint makes it easier to lay the pipe and seal the joints, even under difficult trench conditions. The entire joint is visible for inspection. Back-filling can follow immediately after joints are sealed. Often, *one* machine can do the digging, laying and back-filling.

When finished, the city has a sewer that will serve for generations. The final saving is in the upkeep cost—a long and successful record proves that INDEPENDENT Concrete Pipe Sewers require little or no maintenance.

Every year more American cities are solving their sewer problems, permanently and at low cost, by laying INDEPENDENT Concrete Pipe Sewers. Let us send you estimates and data on *your* sewer projects.

A PROMISE has been fulfilled! The American Railway Express Company recently inaugurated a transcontinental air service for express shipments. New York and San Francisco are connected by aerial express on a 32½ hour schedule.

Another promise is being fulfilled. At the terminals, collections and deliveries are being handled in Diamond T trucks equipped with Hercules Engines. Chosen for known reliability, speed, economy, and utmost endurance, there will be no failure of power supply. And Hercules four-cylinder or six-cylinder engines or power units, on any commercial or industrial job inevitably outperform any comparable power.

TRADE "LEADITE" MARK

Registered U. S. Pat. Office

Even under the most rigorous conditions of service Leadite proves its efficiency

—where a line is subjected to constant vibration the joints must be tight and remain tight

In installing the 12" bell and spigot bridge line illustrated here the element of constant vibration was a serious consideration.

Leadite was used for jointing and has given perfect satisfaction throughout the 5½ years since this Bridge Line was installed—working pressure approximately 105 lbs. per sq. in.

This water department has laid many miles of cast iron water mains with Leadite joints—sizes 6" to 30"—pressures ranging from 40 pounds to 170 pounds per square inch. They say their experience with Leadite has been extremely satisfactory. Their experience with Leadite extends over 20 years.

The ease with which Leadite can be used is another consideration with waterworks engineers in making their specifications for unusual and difficult installations, as well as for general work.

The speed of jointing with Leadite is of great importance to Contractors in helping them complete their work promptly. From experience they know how much time they can save by using Leadite.

Everywhere waterworks engineers specify and use Leadite for the satisfaction it gives, its safety, security and economy.

Twelve-inch c. i. bell and spigot water main —Bridge Line—over 500 feet long—subject to severe vibration—carrying approximately 105 lbs. pressure per square inch.

Specify and use LEADITE It saves at least 75%

Be sure it is LEADITE and accept no imitations

The pioneer self-caulking material for c. i. pipe.
Tested and used for over 30 years.

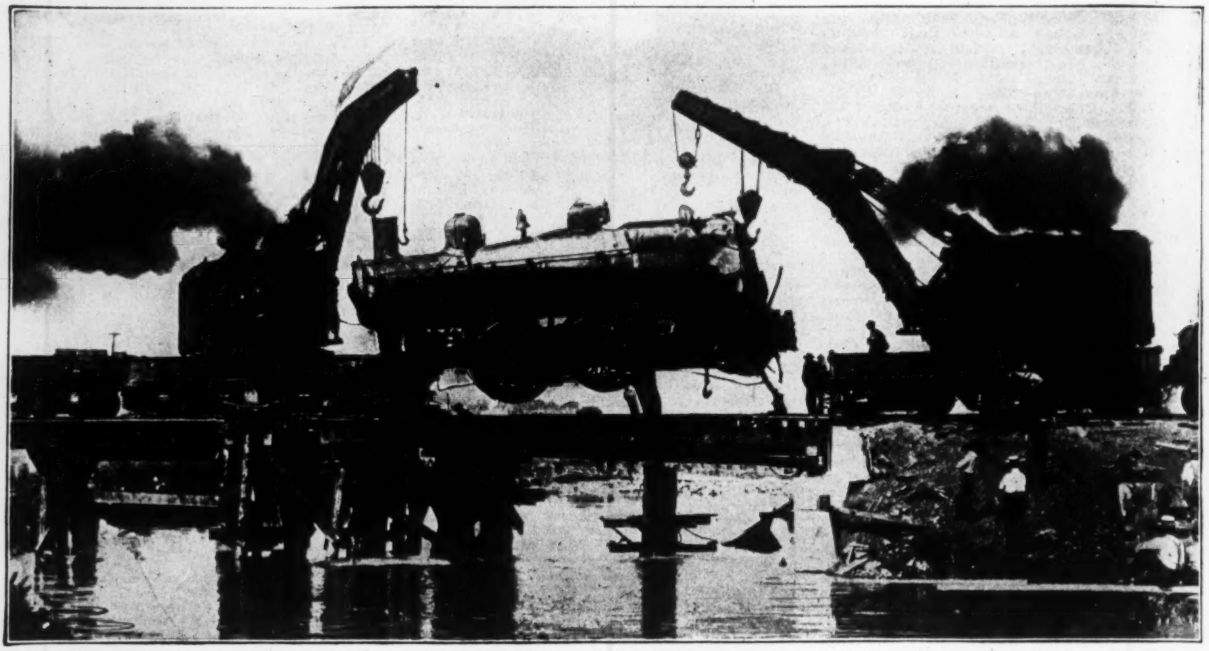
Industrial Brownhoist Cranes Set the Standard ~ ~ ~ ~ ~ ~ For Speed, Length of Service ~ ~ ~ And Economy ~ ~ ~



Industrial and Brownhoist were the originators of the locomotive crane industry in this country. Today there are thousands of these cranes in use—far more than any other make. ¶The advantages of mere numbers are unimportant, but the knowledge gained from long experience can be obtained in no other way. ¶Today Industrial Brownhoist offers you by far the most complete line of similar equipment ever manufactured by one company; locomotive cranes ranging from 7½ to 60 tons, wrecking cranes from 75 to 200 tons, and shovels of ½ to 1¼ yards capacity. ¶Getting the right crane or shovel, the one best size and type for your work, is your best guarantee of satisfactory, economical handling. And Industrial Brownhoist is best qualified to furnish this for you.

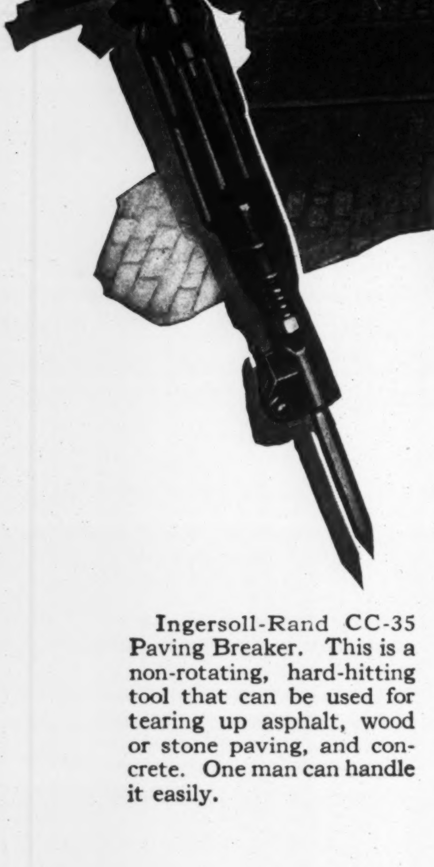
Opening up a trench through pavement with CC Paving Breakers These tools are operated from a 5½" x 5" Ingersoll-Rand Portable Air Compressor.



Ingersoll-Rand CC-35 Paving Breaker. This is a non-rotating, hard-hitting tool that can be used for tearing up asphalt, wood or stone paving, and concrete. One man can handle it easily.

Save on Your Labor—

These two men with Ingersoll-Rand Paving Breakers are doing more work than 15 men could do with hand sledges and picks. The trench was opened through the pavement in a fraction of the time that would have been required if hand methods had been used.

The Paving Breakers are operated by an Ingersoll-Rand 5½" x 5" Portable Compressor. This sturdy machine is entirely self-contained, is dependable, and can easily be moved along with the job.

There are many applications of compressed air on construction, maintenance, and repair work. Savings are being made every day where Ingersoll-Rand equipment is on the job. Let us show you how a portable compressor outfit will save you money.

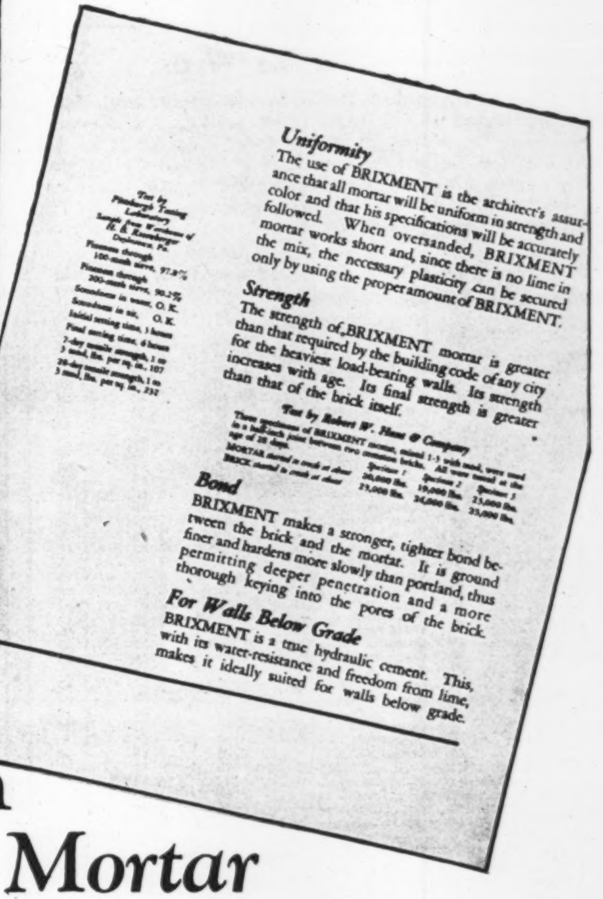
BRIXMENT

for Perfect Mortar

In this ONE Book



Uniformity

The use of BRIXMENT is the architect's assurance that all mortar will be uniform in strength and color and that his specifications will be accurately followed. When oversanded, BRIXMENT mortar works short and, since there is no lime in the mix, the necessary plasticity can be secured only by using the proper amount of BRIXMENT.

Strength

The strength of BRIXMENT mortar is greater than that required by the building code of any city for the heaviest load-bearing walls. Its strength increases with age. Its final strength is greater than that of the brick itself.

Test by Robert W. Hunt & Company

Bond

BRIXMENT makes a stronger, tighter bond between the brick and the mortar. It is ground finer and hardens more slowly than portland, thus permitting deeper penetration and a more thorough keying into the pores of the brick.

For Walls Below Grade

BRIXMENT is a true hydraulic cement. This, with its water-resistance and freedom from lime, makes it ideally suited for walls below grade.

Complete Information on BRIXMENT *for Mortar*

JUST off the press and yours for the asking—a new, concise, sensibly prepared handbook giving all the advantages of BRIXMENT mortar for brick, tile and stone masonry.

Uniformity of strength and color, bonding qualities, adaptability to winter use and work below grade, analysis, tests, estimating data, specifications—these are some of the subjects treated. Also partial list of well-known BRIXMENT buildings with names of architects and contractors.

A valuable self-filing reference book. Your copy on request. The coupon below is for your convenience.

TRADE "LEADITE" MARK

Registered U. S. Pat. Office

Laid 10 miles of water main—and satisfactory in every particular!

—said a waterworks engineer of national reputation, referring to this installation

Here is the story:—

THE Second Taxing District, South Norwalk, Connecticut, U.S.A., has just completed the installation of approximately ten miles of cast iron bell and spigot water mains, varying in size from 6" to 18". The work included the placing of about fifty cutting-in-tees on existing piping and their connection to new work.

Leadite was selected for jointing material after receiving competitive bids for laying with lead.

The total amount of the successful bids for all work, excepting the furnishing of the cast iron pipe, specials and valves, was as follows:

Lead Joints	$155,631
LEADITE Joints	142,535
Difference	$ 13,096
Saving in favor of **LEADITE**	8.4%

The work was performed by contractors experienced in the use of this material and was satisfactory in every particular.

Specifications required that after laying, the pipe should be tested for leakage under water pressures varying from 40 pounds to 115 pounds per square inch, and that the leakage should not exceed two gallons per 24 hours per linear foot of joint. The results of the tests were well within this limit.

This work was under the direction and supervision of Mr. Nicholas S. Hill, Jr., Consulting Engineer, 112 East 19th Street, New York, N.Y., U. S. A.

Leadite is used extensively by thousands of water works engineers, superintendents and contractors with excellent results.

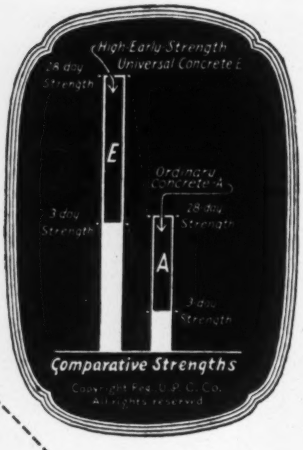
"Traffic Must Not Be Interrupted",

Said the Officials

And This Is How the Contractor Responded



Paving of Ingram Avenue, Pittsburgh, reached Duncan Street just as that thorofare was scheduled to receive "detour" traffic from another important highway. City officials declared that this traffic must not be interrupted and that Ingram Avenue must be completed without interfering with Duncan Street.

McLaughlin Contracting Co., Pittsburgh, contractor, solved the problem by using *High-Early-Strength* Universal Concrete.

At 3 *days* the concrete was stronger than ordinary concrete at 28 *days*. At 5 *days* it exceeded the requirements and was opened to traffic. At 7 *days* it was more than twice as strong as ordinary concrete at 28 *days*. In addition to the higher *early* strength, this concrete has a higher *ultimate* strength, and is therefore *permanently* better and stronger concrete. (See diagram.)

High-Early-Strength Universal Concrete can be used on all types of jobs. It is made by using fully tested methods with the usual labor, usual materials, usual equipment and usual Universal cement. For full details send in the accompanying coupon.

Laying 90-inch INDEPENDENT Reinforced Concrete Sewer Pipe at South Bend, Ind. Carl D. Traxler, Contractor.

Better Sewers—Laid Faster

USING two machines, one for excavating and one for pipe-laying, the contractor made quick time in building this INDEPENDENT Concrete Pipe Sewer in South Bend, Indiana.

Only a very short length of trench was kept open—just as quickly as a section of trench was dug and prepared. pipe units were laid and joined, and the trench back-filled. No waiting for the joints to set—once sealed, INDEPENDENT Pipe Joints *hold* their alignment.

Speedy, efficient work like this is possible on every sewer job where INDEPENDENT Concrete Pipe is used. The "Recessed Joint" enables the contractor to save time, labor and material—build a better sewer at lower cost. This joint is simplicity itself. It facilitates fitting the pipe, and simplifies the sealing of each joint—the UPPER half of the recess is sealed OUTSIDE the sewer; the LOWER half is filled INSIDE the pipe. Cave-ins, wet or muddy trenches do not interfere with sealing the joints. The entire joint is visible for inspection.

There are many other time and money-saving features you should know about INDEPENDENT Concrete Sewer Pipe.

Let us send you information and estimates on your concrete pipe sewer projects.

BUILD BETTER—WITH *STEEL*

NOTHING but Steel is good enough! The most dependable material: Steel! Only Steel will stand *any* shock! . . . These are headlines of advertising appearing as part of the extensive educational program now being carried on by the American Institute of Steel Construction. This advertising supplements the authoritative publications, counsel, and researches of the Institute.

Already the Institute's influence has been reflected in the adoption of its standard specification and the use of its Code of Practice in more than 100 important cities in the United States and Canada, with an estimated saving of $30,000,000 a year to owners and taxpayers. Send for your copy of the Specification, Code of Practice, and the illustrated fact-book of structural steel, "STEEL NEVER FAILS."

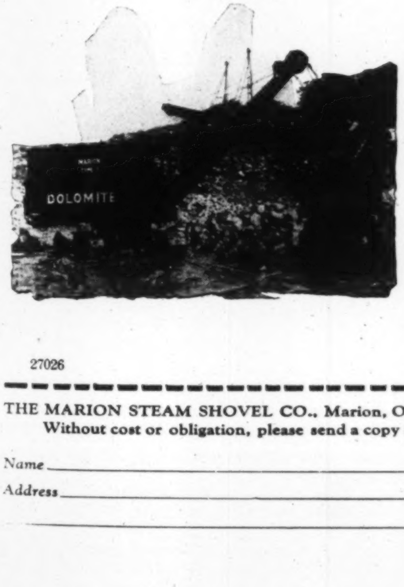
MARION

Even the Rock of Gibraltar won't stall the engine on the ONE YARD TYPE 7 Gas-Electric—



OF course, the Type 7 won't move it either — but the engine which generates the electric power on the shovel — will keep on pulling — IT CAN'T BE STALLED. The hoist motor has the characteristics of the steam engine—high speeds for the light loads and low speeds for the heavy loads — a flexibility so essential to low maintenance costs, and smoother operation. It is the only gas driven shovel in the world with no troublesome clutches or other mechanical connection between the gas engine and the hoisting machinery. And, in addition, there are separate motors for direct driving of both the swinging and crowding motions. Get the whole story of this popular machine in Bulletin 319. Mail the coupon today.

"LEADITE"

MARK

Registered U. S. Pat. Office

Waterworks engineers and superintendents prefer to use Leadite for joints—*It assures them that the pipe line will be completed and a revenue producer well within the time allowance.*

THE speed and simplicity of use of Leadite is a big factor in rapidly expanding communities.

This illustration shown here is a scene from an installation where Leadite was used with c. i. bell and spigot pipe.

These lines are in one of the fastest growing cities in the South. The speed of Leadite jointing makes it possible to lay pipe fast enough to keep up with the new building and real estate expansion.

In addition, Leadite joints are permanent. For over 30 years Leadite has been tested and used under all pipe laying conditions and has proven completely satisfactory.

The saving of labor time and advantages of using Leadite produce a saving of over 75% of the cost of making the joints.

Benefit by the experience of thousands of engineers, superintendents and contractors who have used Leadite.

Crowding *28 Days* into *3 Days*

You Can Do It With High-Early-Strength Concrete

Concrete with a *3-day* strength equal to the *28-day* strength of ordinary concrete; concrete with a *28-day* strength twice that of ordinary concrete; concrete that is *permanently* better and stronger than ordinary concrete—that is *High-Early-Strength* Universal Concrete.

By using it, you crowd *28 days* into *3 days*. And as this concrete has a higher *ultimate* strength in addition to a higher *early* strength, you secure a *permanently* better and stronger job. (See diagram.)

High-Early-Strength Universal Concrete is used on all types of jobs. It is made by using fully tested methods with the usual equipment, usual labor, usual materials, and usual Universal Cement. For full details, send in the accompanying coupon.

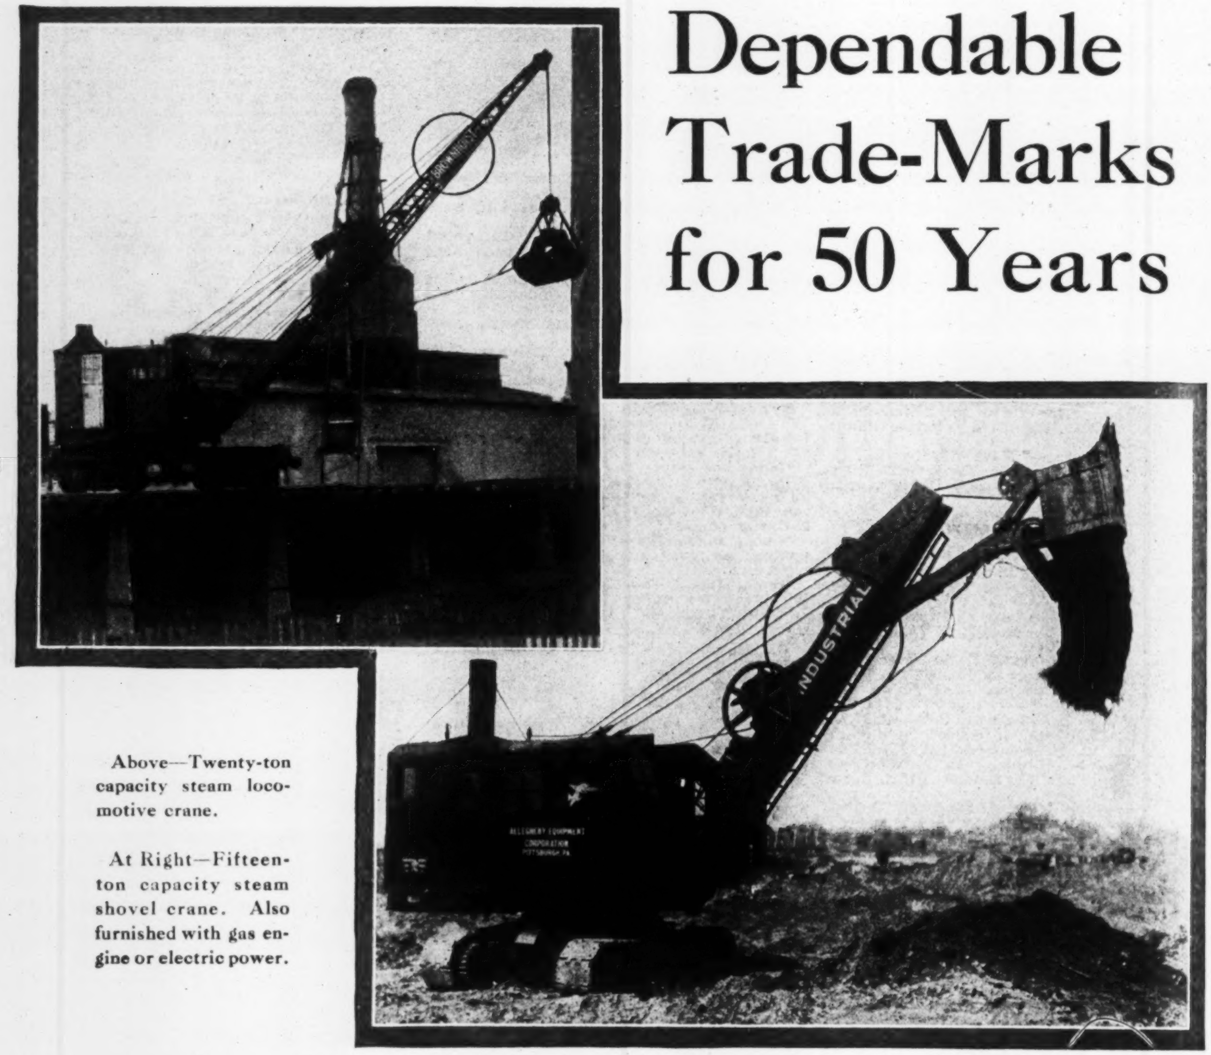
Dependable Trade-Marks for 50 Years



Above—Twenty-ton capacity steam locomotive crane.

At Right—Fifteen-ton capacity steam shovel crane. Also furnished with gas engine or electric power.

No company can offer you the wide choice of cranes for your work and none has had the long and valuable experience of Industrial Brownhoist in the economical handling of materials with crane equipment.

Industrial Brownhoist builds many different types of locomotive and wrecking cranes that range in capacity from 7½ to 200 tons. We also build crawler cranes and shovels, all of which types have proved their dependability in the hands of a great number of owners.

Economical handling is no problem if you have dependable equipment to do the work. Our sales engineer, who is located near you, would like to talk over your material handling methods with you. May he call?

Three I-R Portables in use on a subway construction job

Twenty-Four-Hour Continuous Service— Six Days a Week

THE three Ingersoll-Rand Portable Air Compressors shown above supplied air to operate eight "Jackhamer" Rock Drills, one "Leyner" Sharpener, a No. 5 Oil Furnace, and one 30,000-lb. crane.

This job was run on three 8-hour shifts, meaning 24-hour service for the compressors. Not only that, but the work required full-load operation at all times. Despite these severe conditions, the compressors continued to work steadily, with only Sunday shut-downs, for a period of several weeks.

I-R Portables are designed and built to stand up under the daily full-load conditions so frequently encountered in construction and maintenance work. There is a size and a mounting to fit the requirements of any job. At your request we shall be glad to send you actual figures showing the savings to be made on every type of contracting work.

Jordan-Marsh in Boston Fill this big Garage with Shoppers' cars

SINCE as keen merchants as this old-established company, along, with a goodly number of others of equal standing, recognized the need for and profit in a Parking Garage for their customers' cars—

doesn't the fact stand out, clear and bold, that other department store owners will soon be following suit. There's an architectural commission waiting the man who puts over the idea. Can we help you work up a proposition for someone you have interested?

Our Garage Data Sheets and the booklet Building Garages for Profitable Operation" will be helpful. Ask for Edition E.

Common Brick Storage Bins

Common Brick Storage Bins provide most economical storage for the items listed and are also adaptable to materials of a similar nature requiring storage.

Common Brick circular storage bins, reinforced with steel laid in the mortar joint, provides ample strength, great stability and the highest degree of weather and fire resistance—at low cost.

Whenever it is necessary to protect the contents from freezing, we provide our standard Ideal hollow wall construction which permits warm air to circulate within the wall—adds strength—insures dryness.

Gravity discharge of contents is, of course, a feature.

Years of enduring service is proof of these superior qualities.

Send for two books which fully describe design and construction. Fifteen cents.

Making sure that the surface is right to begin with, is the only assurance of real satisfaction in applying decorative treatments to new plaster or concrete walls. Hard-n-tyte Liquid Wall Primer gives you that assurance. Beyond neutralizing the alkali action which tends to discolor decorating, it hardens the surface and so fills the pores that you save the usual priming coat of paint. When used on new plaster or concrete surfaces, decorating can proceed without delay.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Only 51 days between the decision to build an emergency water works plant - - *and the finished job!*

- - the speed with which Leadite jointing can be accomplished contributed to this remarkable feat.

THE line illustrated here is 26,000 ft. of 12" pipe with LEADITE joints.

Owing to the emergency which arose in the city for which the installation was made no trenching could be attempted.

The line lies throughout its entire length on the surface of the ground without any bracing except at the bends.

After completion the line was tested to 260 lbs. pump pressure.

Specify and use
LEADITE
—it saves at least 75%

Part of the 26,000 ft. installation, crossing an open field. Chas. E. Waddell & Co., Engineers.

It is now under constant pump working pressure of 230 lbs. For over 30 years now, LEADITE has demonstrated by test and experience that it is absolutely permanent and secure.

Leadite is self-caulking and is so simple to use that the method of using it can be taught to even the most inexperienced help in a very short time.

Added to its speed and ease of use—Leadite saves at least 75% on account of saving in material and labor.

Be sure it is
LEADITE
and accept no imitations~~~

The pioneer self-caulking material for c. i. pipe.
Tested and used for over 30 years.

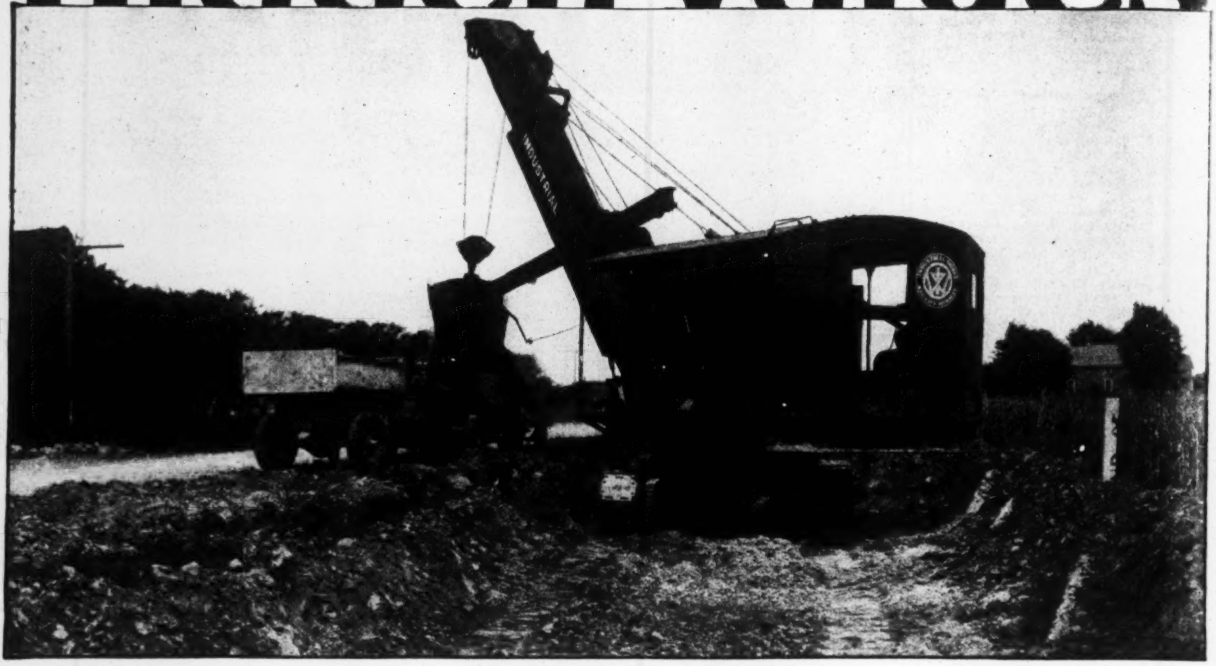
Hidden Values



Really Make Your Shovel or Crane

Like your automobile or davenport at home, it's the better materials down inside and the careful attention to every detail of design and workmanship that puts real value into a shovel or crane.

A half century's experience in building equipment to the highest standards is Industrial Brownhoist's pledge to you of value. Without it, we could not have produced the many thousand machines now in operation—nor could we offer you by far the most complete line of similar equipment ever built by one maker.

Handling costs are often the dividing line between profit and loss on many jobs. If there is a doubt in your mind as to the economy of your present methods, one of our sales engineers could be of help. May he call?

ALL INDUSTRY Profits by Hercules Power

Hercules matchless ability to do a power job better and cheaper enables every Hercules user to set new standards of profit. This ability results directly from Hercules strength and simplicity.

Forty-three per cent *additional* output was secured with Hercules Power in a sawmill.

Work was kept eight months ahead of contract time with Hercules Power in grading equipment.

Hercules loaded five shovelfuls instead of four in excavating. Thus Hercules Power sets new records of endurance throughout American industry.

The simplicity of Hercules design, the consistent precision of Hercules production, and the Hercules factor of strength throughout underlie the successful operation of more than 75,000 Hercules Engines and Power Units. Hercules personal engineering service and the complete Hercules line of fours and sixes assures your getting the right engine in the right place.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Eliminating Repairs and Maintenance Costs

TRENTON WATER WORKS, Trenton, N. J., has been using Leadite for making joints in c. i. bell and spigot water mains for a great many years with entire satisfaction.

They have laid nearly 75 miles of c. i. pipe of various sizes with Leadite joints.

Trenton has very good paved streets and they have never had to dig up a Leadite joint for repairs during all the time they have been using Leadite. They consider this excellent performance for Leadite joints.

They find the use of Leadite has reduced to a minimum repairs and maintenance costs.

Trenton Water Works has always found Leadite joints efficient and economical.

They keep a check on their distribution system by water waste surveys.

During the severe winter of 1917-18 Trenton Water Works had over 2000 frozen services. Many of these services were connected to mains laid with Leadite joints. They had no difficulty in thawing, with electrical apparatus, services connected with mains which were laid with Leadite joints.

Mr. Alvin Bugbee is Superintendent of the Trenton Water Works.

When time is money . . .

use High-Early-Strength concrete
made with standard (not special)
Universal Cement

Conditions	Solution
Church Street and New Street are both important thorofares in Champaign, Ill.—two good reasons for building and re-opening the intersection with minimum delay.	The intersection was concreted and ready for heavy traffic in *3 days* thru the use of *High-Early-Strength* Universal Concrete.
Orders to repave Zane and Madison Streets, Martins Ferry, Ohio, included instructions to re-open the intersection at earliest possible time.	The intersection, made with *High-Early-Strength* Universal Concrete, was placed on Sunday and opened to traffic Wednesday morning.
The grade was to be changed at three intersections in La Grange Park, Ill. Each day's delay in re-opening the streets meant inconvenience to hundreds of motorists and loss of business to merchants.	*High-Early-Strength* Universal Concrete was used. Intersections were placed on Tuesday and opened to traffic Saturday morning.

Illustration above shows intersection of Zane and Madison Streets, Martins Ferry, Ohio, placed with *High-Early-Strength* Universal Concrete. Consolidated Engineering Co., Wheeling, W. Va., contractor; Carl Lash, City Engineer. Standard Universal Cement furnished by Scott Lumber Co., Martins Ferry.

Ideal for Use in Intersections

If it is important to keep *streets* open to traffic, it is doubly important to keep *intersections* open. When an intersection is closed *two* streets are closed.

At the left are described typical instances of how *High-Early-Strength* Universal Concrete has helped to save weeks in re-opening busy intersections.

High-Early-Strength Universal Concrete has a *3-day* strength equal to the *28-day* strength of ordinary concrete. It is made by using fully tested methods and the usual labor, usual equipment, usual materials, and usual Universal cement. Such concrete not only develops a higher *early* strength, but also a higher *ultimate* strength, and is therefore *permanently* better and stronger concrete. (See diagram.) IT'S TIME TO TALK ABOUT *STEEL*

It's time to say *again* that there's no other structural material so economical, so durable, so fool-proof, so *strong* and *safe* as Steel.

It's time to clear the atmosphere of claims and counter-claims for this or that building medium, through the unanswerable logic of *facts*. To this end the American Institute of Steel Construction, Inc., is sponsoring a series of educational advertisements which will bring home the truth about steel construction to the owner and prospective builder as well as to the engineer and architect.

Write for the fact-book, "STEEL NEVER FAILS."

Analysis of Bids on Bridge River Power Tunnel

British Columbia

NINE contractors submitted estimates on the Bridge River power tunnel for the British Columbia Electric Railway Co., Ltd., of Vancouver, and the spread between the low and high bids was only 34 per cent. The contract was awarded on Oct. 1 to the Pacific Engineers, Ltd., Vancouver, with which is associated The Henry & McFee Construction Co., of Seattle, for $1,249,530, which amounts to $94.66 per lin.ft. Time of completion is given as August, 1930. E. E. Carpenter is consulting engineer.

This is part of the Bridge River Project, the initial stage of which includes the development of 45,000 kva. and its transmission to Vancouver. The site of the tunnel lies 150 miles northeast of that city and is reached by the Pacific Great Eastern Ry., which passes the powerhouse site. The tunnel is 12,618 ft. long.

The tunnel must be built entirely from two headings. The Seton portal (or south portal) lies 2,000 ft. from and 1,200 ft. higher than the railway station at the powerhouse site, with which it is connected by an inclined tramway with hoist for transporting supplies for the tunnel work. The Bridge River portal (or north portal) lies eight miles by roadway from the Bridge River railway station. All supplies for the north portal must be hauled over this roadway, which crosses the Mission Mountain summit 3,000 ft. above the powerhouse site.

The company will unload, store and handle all the contractor's materials from railway cars at Bridge River station, and haul them up the tramway to the Seton portal and over the mountain to the Bridge River portal. The company will also furnish electric power, lumber, cement, sand and gravel, at both portals. These services will be charged for at the following rates:

Electric power, per kw.-hr.	$0.02
Unloading, storing, handling and forwarding miscellaneous supplies other than lumber, cement, sand and gravel, per 100 lb.	.10
Loading and hauling by motor truck to Bridge River portal miscellaneous supplies other than lumber and cement, per 100 lb.	.25
Lumber:	
F. o. b. Seton portal, per M. ft., b. m.	32.00
F. o. b. Bridge River portal, per M. ft., b. m.	36.00
Cement, Canadian Standard:	
F. o. b. Seton portal, per bbl	5.00
F. o. b. Bridge River portal, per bbl	5.60
(Rebates for sacks, 20 cents each)	
Sand and Gravel:	
F. o. b. tramcar at Seton portal, cu.yd.	2.75
At Bridge River portal the contractor must obtain his own sand and gravel from the river bars.	

ONE type or section will be employed throughout in excavating the main tunnel bore. Several types of lining may be used, depending upon the location and nature of the rock encountered. The cross section of the excavated bore is approximately equivalent to a circle 12 ft. in diameter. The shape is generally a horseshoe section, and the types contemplated in the contract are as follows:

Type	Description	Length Lin.Ft.
R	Untimbered and unlined rock section	4,668
S	Untimbered and lined horseshoe section	850
T	Untimbered and lined circular section	300
U	Timbered and lined horseshoe section	5,200
V	Timbered and lined circular section	
	(a) Plain concrete lining	1,100
	(b) Reinforced concrete lining	500
	Total length	12,618

THE table of unit prices shows the lowest bidder estimated as follows on the major groups: excavation, $674,056; concrete lining, $344,720; grout and grouting, $70,000; concrete for intake tower, $67,904; permanent timbering, $62,250; reinforcing steel, $30,600. The unit prices of the nine bidders average as follows for the principal items:

Excavation	
11,000 cu.yd. open cut, common	$1.51
7,300 cu.yd. open cut, rock	4.47
12,618 lin.ft. main tunnel	52.98
Concrete	
3,200 cu.yd., intake tower	22.64
11,800 cu.yd., main tunnel	23.47
3,500 cu.yd. grout and grouting	24.85
Reinforcing steel, 600,000 lb.	.065
Timbering, permanent, 750 M. ft., b.m.	83.20

THE difference between the total bids of the lowest bidder and the next to the lowest is $87,084. Excavating the main tunnel is the largest single item, and the spread here between low and next to low is $119,300. The highest bid on excavating the main tunnel is 60 per cent more than the lowest.

Lining the main tunnel is next to the largest item, and five of the bids were under the low bidder's $301,844, and the highest bid was only 14 per cent above this.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

"The World's Playground" has used Leadite with complete satisfaction for over 20 years

ATLANTIC CITY, New Jersey, is proud of its well-paved streets. In laying new or additional cast iron mains, the engineers always use Leadite. They know from the experience of nearly one-quarter of a century that Leadite joints are absolutely secure and that the occasion will not arise where paved streets have to be dug up to repair the line.

In addition to the mains under the paved streets, Leadite was used for jointing the 24" main that runs under the famous boardwalk.

Other lines run through salt marshes, over bridges and under numerous railroad tracks.

The sizes of these mains run from 4" to 48".

Mr. L. Van Gilder is Engineer and Superintendent of the Atlantic City water department.

Added to the security and permanence of Leadite joints there is a saving of 75%.

For its economy—permanence—security—and the speed with which jointing can be finished—Water Works men specify and use Leadite.

Facts You Should Know about *High-Early-Strength* Concrete

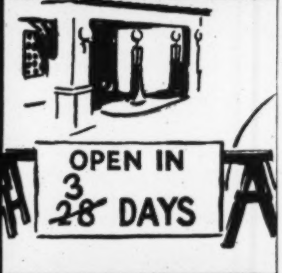
High-Early-Strength Concrete is made with the usual labor, usual materials and usual equipment—

Universal
Portland Cement
Universal
Universal
Portland Cement

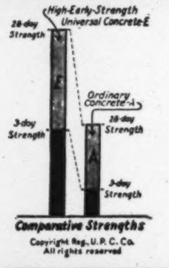
and usual Universal cement

—all applied according to fully tested methods.

At 3 *days* *High-Early-Strength* Universal Concrete is as strong as ordinary concrete at 28 *days*.



At 28 *days* it has twice the strength of ordinary concrete.



Having a higher *ultimate* strength in addition to a higher *early* strength, it is *permanently* better and stronger than ordinary concrete. (See diagram)

High-Early-Strength Universal Concrete may be made as workable as desired and used on all types of jobs.

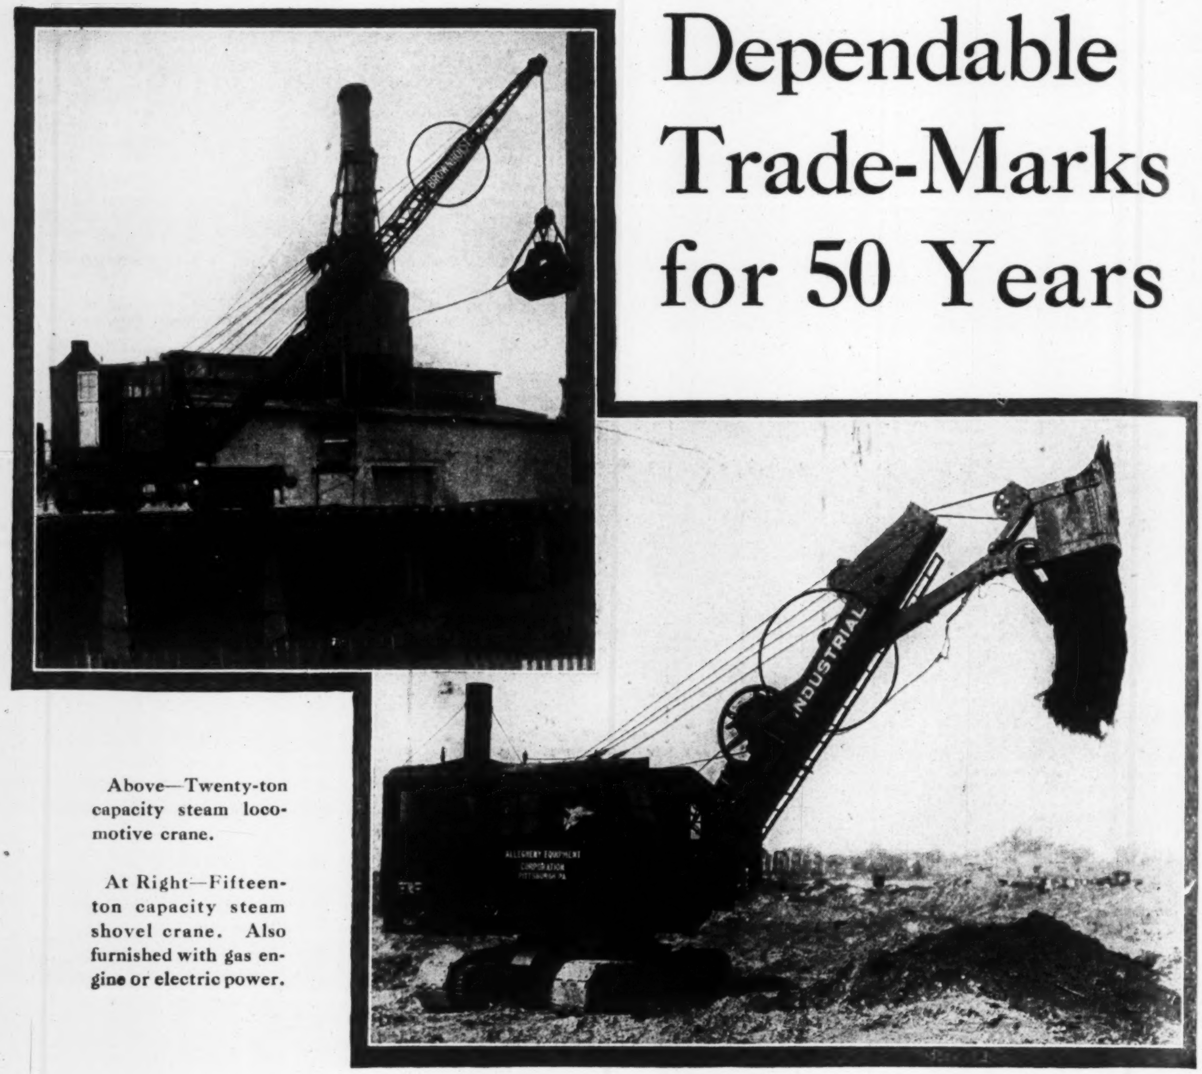
Dependable Trade-Marks for 50 Years



Above—Twenty-ton capacity steam locomotive crane.

At Right—Fifteen-ton capacity steam shovel crane. Also furnished with gas engine or electric power.

No company can offer you the wide choice of cranes for your work and none has had the long and valuable experience of Industrial Brownhoist in the economical handling of materials with crane equipment.

Industrial Brownhoist builds many different types of locomotive and wrecking cranes that range in capacity from 7½ to 200 tons. We also build crawler cranes and shovels, all of which types have proved their dependability in the hands of a great number of owners.

Economical handling is no problem if you have dependable equipment to do the work. Our sales engineer, who is located near you, would like to talk over your material handling methods with you. May he call?

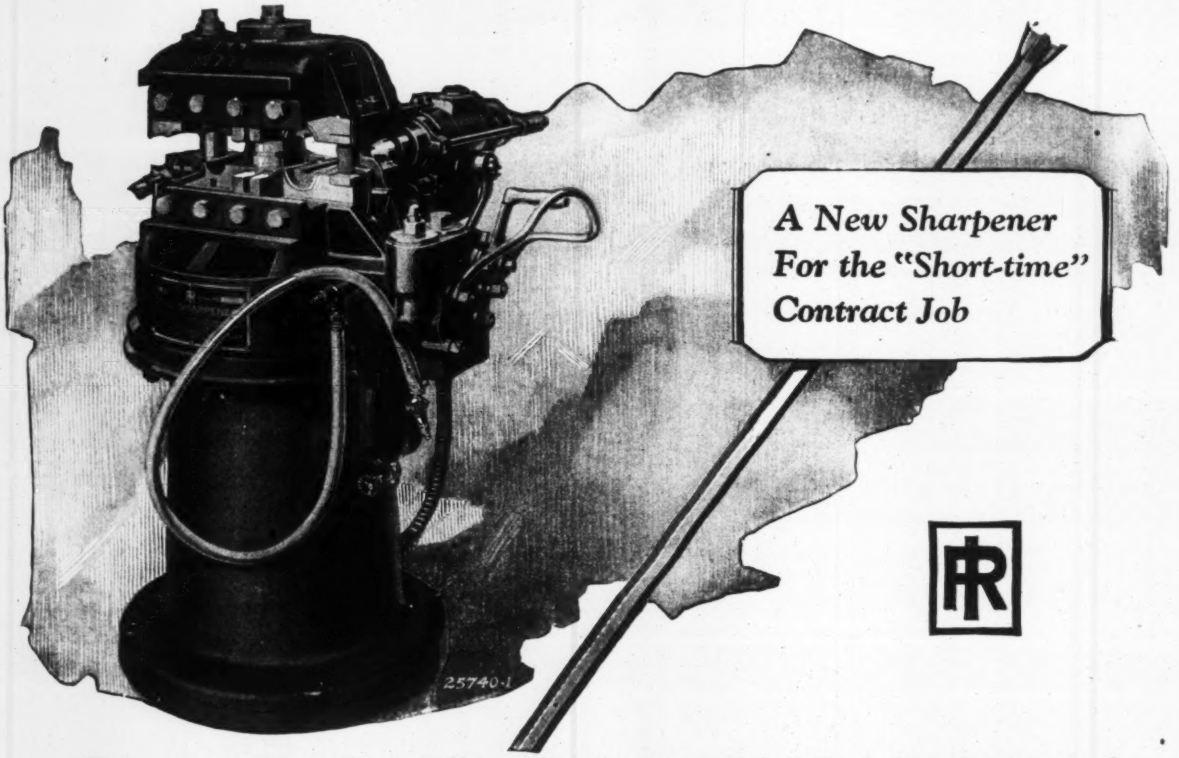
No. 34 Leyner drill sharpener is designed especially for sharpening and shanking "Jackhamer" steels



A New Sharpener For the "Short-time" Contract Job

This new machine gives to "short-time" contract jobs all of the advantages of machine sharpening which heretofore have been possible only on the larger contracts having permanent up-to-date blacksmith shops.

It will make all of the standard bits up to 2½" gauge and standard shanks on steel up to 1⅛" diameter.

In addition it will rapidly and economically form moil points and Paving Breaker shanks on 1⅛" solid hexagon steel. It will do upsetting and bending jobs, and forge bolt and river heads, spikes, pins, wedges, hand picks, etc.

The following new refinements have been incorporated in this machine:

- Air reservoir in the base
- Greater movement of crosshead
- Adjustable hammer cylinder
- Dolly spring carriage
- Large vertical type piston valve
- Wider and longer form spaces
- More powerful hammer
- Enclosed air passage
- Positive lubricating systems
- Snap piston rings
- Scale guard on cross-head rod
- Attached safety block

Write or phone our nearest branch office for your copy of the new two-color bulletin describing all sizes of "Leyner" Sharpeners. This bulletin is just off the press.

VULCANITE SUPER CEMENT

Resists the Action of SULPHATE and ALKALINE WATERS

Vulcanite Super Cement is a more efficient form of Portland Cement in which a portion of the gypsum, ordinarily used to regulate the set, is treated with a catalytic agent.

This treated gypsum, when ground with the regular run of VULCANITE Portland Cement clinker, produces VULCANITE Super Cement. The rate of hardening is not accelerated; there is no change effected in color or setting time. VULCANITE Super Cement meets all the physical and chemical test requirements of the standard specifications for Portland Cement of the American Society for Testing Materials.

It produces a dense homogeneous concrete which is permanently waterproof, oilproof, and resistant to sulphate and alkaline waters.

No waterproofing compounds are necessary.

VULCANITE

Permanently Waterproof and Oilproof

H. E. Brookby, Development Engineer of the United States Gypsum Company, in an address before a group of engineers in Detroit, Mich., September 28, 1927 stated:

"The rapid deterioration of Portland Cement Concrete in alkaline sulphate waters seriously handicaps concrete in underground work where such waters are encountered. In wet gypsum mines, ordinary concrete seldom lasts over 18 months.

"The concrete must not only be impervious to water, but also must not appreciably absorb and condense within itself moisture or water vapor from the humid mine atmosphere, for in this moisture absorption carbon dioxide and hydrogen sulphide must also be absorbed and then the chemical reactions follow.

"With us, so far, Super Cement has met these severe conditions and Super Cement Concrete is *in place after four years,* where had it been only ordinary concrete, its life would have been under *two* years. . . . . "We feel we have been warranted in making Super Cement Concrete standard concrete for the 'wet gypsum mine' concrete work of our company."

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Even under the most rigorous conditions of service Leadite proves its efficiency

—where a line is subjected to constant vibration the joints must be tight and remain tight

IN installing the 12" bell and spigot bridge line illustrated here the element of constant vibration was a serious consideration.

Leadite was used for jointing and has given perfect satisfaction throughout the 5½ years since this Bridge Line was installed—working pressure approximately 105 lbs. per sq. in.

This water department has laid many miles of cast iron water mains with Leadite joints—sizes 6" to 30"—pressures ranging from 40 pounds to 170 pounds per square inch. They say their experience with Leadite has been extremely satisfactory. Their experience with Leadite extends over 20 years.

The ease with which Leadite can be used is another consideration with waterworks engineers in making their specifications for unusual and difficult installations, as well as for general work.

The speed of jointing with Leadite is of great importance to Contractors in helping them complete their work promptly. From experience they know how much time they can save by using Leadite.

Everywhere waterworks engineers specify and use Leadite for the satisfaction it gives, its safety, security and economy.

Twelve-inch c. i. bell and spigot water main —Bridge Line—over 500 feet long—subject to severe vibration—carrying approximately 105 lbs. pressure per square inch.

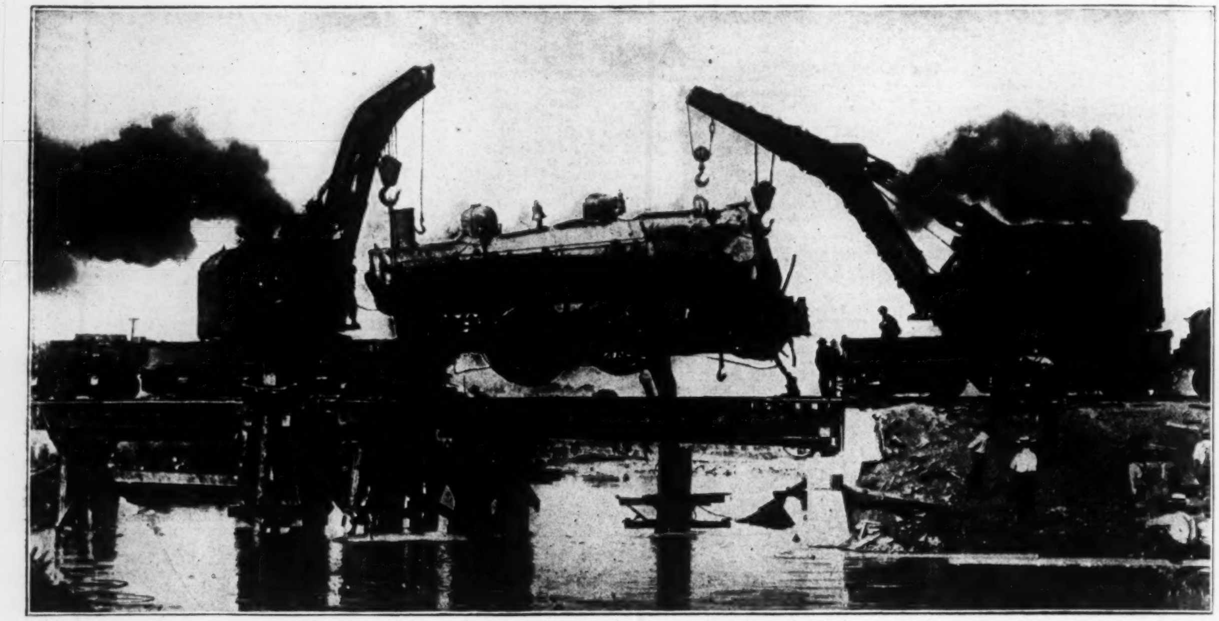
Industrial Brownhoist Cranes Set the Standard ~ ~ ~ ~ ~ ~ For Speed, Length of Service ~ ~ ~ And Economy ~ ~ ~



Industrial and Brownhoist were the originators of the locomotive crane industry in this country. Today there are thousands of these cranes in use—far more than any other make. ¶The advantages of mere numbers are unimportant, but the knowledge gained from long experience can be obtained in no other way. ¶Today Industrial Brownhoist offers you by far the most complete line of similar equipment ever manufactured by one company; locomotive cranes ranging from 7½ to 60 tons, wrecking cranes from 75 to 200 tons, and shovels of ½ to 1¼ yards capacity. ¶Getting the right crane or shovel, the one best size and type for your work, is your best guarantee of satisfactory, economical handling. And Industrial Brownhoist is best qualified to furnish this for you.

CC-35 Paving Breaker—a non-rotating, hard-hitting, one-man compressed air tool that is used for cutting through hardpan, asphalt, concrete, etc.

Type 20 Portable Compressor

This sturdy machine is a self-contained air power plant that is always ready to go to work. There are six sizes, each of which will operate various combinations of Ingersoll-Rand Air Tools.

Write for a copy of "100 and 1 Ways to Save Money with Portable Compressors." This 140-page book will be sent free to anyone interested.

Reduce Traffic Interference

Street repair work must be fast. With Ingersoll-Rand Portable Air Compressors and Paving Breakers on the job, it *is* fast. Not only can the work be done more quickly, but fewer men are required.

I-R Paving Breakers are designed to cut through the asphalt surface and break up the concrete sub-base. One of these hard-hitting, one-man tools will do the work of twelve men working with hand picks.

Ingersoll-Rand Portable Air Compressor outfits are entirely self-contained and can easily be moved to any desired location. They need little attention, and are designed to stand the continuous day and night operation encountered in street repair work.

Let us tell you about the savings to be made with portable compressors and compressed air tools. Full and authentic data will be sent upon request.

d'Humy Motoramps extend the street to each of the 10 car-storage floors of this building.

EVERY large city has in its downtown district a plot, or plots, on which the erection of a modern, multifloor garage will return a handsome net profit on the investment. A glance out your window at traffic-congested streets points the need. The experience of many proves the profit. A profitable architectural commission or construction contract awaits the man who translates his vision into action.

In your study of garage possibilities it will be helpful for you to have our "Building Garages for Profitable Operation." Ask us to send the new Edition "N."

Close Bidding on Wallace County (Kan.) Road

Between the low and the high of the bids opened Oct. 21 for the 24-mi. federal aid project 375 A B in Wallace County, Kan., was a spread of 9 per cent. The low bid was $31,602; the engineer's estimate, $37,067—a difference of 14 per cent. There were four bidders, and the difference between high and next to high was $377.

There were four sections on which the low bids were: (1) $6,511; (2) $1,191; (3) $9,229; (4) $14,671. Calling the lowest bidder A and the next bidder B, their differences on the four sections were as follows: (1) $106; (2) $9; (3) $608; (4) $1,014; all in favor of A.

Sect. 1 is an 82-ft. wet crossing, calling for piling, riprap and reinforced concrete. For the concrete, A bid $20, against B's $21, thereby gaining $164; but he nearly balanced this by bidding 6c. per lb. for 25,410 lb. reinforcing steel, against B's 5.5c. A gained again on his bid of $2 per cu. yd. for riprap against B's $3.

A's estimating on gravel and haulage won the contract. On the 17,000 cu. yd. of gravel he estimated 79c. against B's 82c.; for hauling the gravel he estimated 18c. per yard mile, against B's 20c. A is the San-Ore Contracting Co., McPherson; B, Rogers Construction Co., Norton; C, Schultz Contracting Co., Wichita; D, Hall-Hardman Construction Co., Alton; E, Engineer's Estimate. TRADE "LEADITE" MARK

Registered U. S. Pat. Office

Laid 10 miles of water main—and satisfactory in every particular!

—said a waterworks engineer of national reputation, referring to this installation

Here is the story:—

THE Second Taxing District, South Norwalk, Connecticut, U.S.A., has just completed the installation of approximately ten miles of cast iron bell and spigot water mains, varying in size from 6" to 18". The work included the placing of about fifty cutting-in-tees on existing piping and their connection to new work.

Leadite was selected for jointing material after receiving competitive bids for laying with lead.

The total amount of the successful bids for all work, excepting the furnishing of the cast iron pipe, specials and valves, was as follows:

Lead Joints	$155,631
LEADITE Joints	142,535
Difference	$ 13,096
Saving in favor of **LEADITE**	8.4%

The work was performed by contractors experienced in the use of this material and was satisfactory in every particular.

Specifications required that after laying, the pipe should be tested for leakage under water pressures varying from 40 pounds to 115 pounds per square inch, and that the leakage should not exceed two gallons per 24 hours per linear foot of joint. The results of the tests were well within this limit.

This work was under the direction and supervision of Mr. Nicholas S. Hill, Jr., Consulting Engineer, 112 East 19th Street, New York, N.Y., U. S. A.

Leadite is used extensively by thousands of water works engineers, superintendents and contractors with excellent results.

Crowding 28 *Days* into 3 *Days*

You Can Do It With High-Early-Strength Concrete

Concrete with a *3-day* strength equal to the *28-day* strength of ordinary concrete; concrete with a *28-day* strength twice that of ordinary concrete; concrete that is *permanently* better and stronger than ordinary concrete—that is *High-Early-Strength* Universal Concrete.

By using it, you crowd 28 *days* into *3 days*. And as this concrete has a higher *ultimate* strength in addition to a higher *early* strength, you secure a *permanently* better and stronger job. (See diagram.)

High-Early-Strength Universal Concrete is used on all types of jobs. It is made by using fully tested methods with the usual equipment, usual labor, usual materials, and usual Universal Cement. For full details, send in the accompanying coupon.

Independent

Concrete Pipe Sewers

Low Cost—Easy to Lay—Permanent

FOR your storm or sanitary sewers, you demand a material that is strong, durable, economical, and *proved* in sewer service. And naturally, you want to get each sewer built at the lowest possible cost.

INDEPENDENT Reinforced Concrete Pipe meets your requirements better than any other sewer material. It is strong and durable—combines the strength of steel with the permanency of concrete. It is low in first cost—built near the job in a special pipe plant—inspected, tested and cured under expert supervision—and delivered along the line of work.

It is easy to lay in *any* trench—"Recessed" joints facilitate sealing and insure tightness. It is highly efficient—provides free flow and maximum carrying capacity. It requires little or no upkeep, and it is backed by a long and successful service record in numerous cities, and by the largest concern in the country specializing in building reinforced concrete sewer pipe.

Our sizes, prices, service facilities, and other engineering data will interest you. Write, wire or phone us (Main 2131).

WHEN ONLY *STEEL* WILL SERVE

If you want to specify the strongest building material known, for either tall or small structures, you must specify steel. If you want minimum weight and maximum floor space per strength-unit, only steel will do. If you want a fully homogeneous material—one produced in large quantities under expert supervision, delivered to the job finished and foolproof, you must insist upon steel.

Facts like these are being given to the public through the educational advertising of the American Institute of Steel Construction, now appearing in general magazines, in business publications and in professional journals. Write for the full details of this remarkable educational work, in which your co-operation is requested. Ask also for the Institute's Code of Practice, Standard Specifications and the fact-book, "STEEL NEVER FAILS."

Thirteen Bids on Eight Types of Pavement in Mississippi

Between the low and the high of the thirteen bids submitted for paving with concrete 15 mi. of the Raymond-Utica highway in Mississippi was a difference of only 14 per cent. Bids were asked on eight types of pavement, but the lowest bid of all was for plain concrete, Bates type section, 9-6-9, 1:2:3 mix, submitted by the Lawrence Construction Co. of Jackson, Miss., $410,191.52, to whom the contract was awarded.

This project is one of several that are to be constructed in Hinds County, in which is the state capitol, and which has the highest assessed valuation in the state. This section is part of the 100 mi. program now under way. It will connect at Raymond with the paved road from Raymond to Jackson. Federal aid is not given this project, which is constructed wholly from county funds.

All materials are furnished by the contractor. Cement was quoted by the mills at $2.70 per bbl., f.o.b. any of the shipping points from Raymond to Utica. Local gravel from pit within 9 mi. of Utica via rail was quoted at 95c. per ton f.o.b. shipping points; sand from same source, 80c. per ton. The nearest competing gravel and sand were quoted at $1.25 and $1 per ton f.o.b. job.

The average haul from shipping points upon the railroad is 3½ mi. The maximum grade of the road to be constructed is 5.65 per cent, and upon the side roads from railroad to project 7 per cent.

As indicated by the close total bids, the unit prices for the large items are remarkably close. Common excavation varies between 30c. and 39c.; borrow excavation between 28c. and 35c. The concrete pavement low bid is $1.87, and the range is $1.83 to $2.17 (highest bidder for total job). The range on reinforcing steel is 4c. to 6c.; structural steel, 5½c. to 7c.

The lowest five and highest bidders, together with their unit prices, are as follows: (A) Lawrence Construction Co., Jackson; (B) Miller-Hutchinson Co., Taylorville, Ill.; (C) S. K. Jones Construction Co., Memphis, Tenn.; (D) Merrill Engineering Co., Jackson; (E) Langston Contracting Co., Orlando, Fla.; (F) R. G. Lassiter & Co., Raleigh, N. C.

Wide Variation in Bids for a St. Joseph, Mo., Sewer

Twenty bids were submitted for the Brookdale-Petee relief sewer in St. Joseph, Mo., ranging from $462,149.94 to $765,946.15. The wide difference was probably due to hazardous construction which was variously estimated. The low bidder (A. A. Davis & Co., Kansas City) was awarded the contract.

The sewer to be constructed is 9,500 ft. long, extending from 19th St. at Lafayette St., running in a northeasterly direction and paralleling the Chicago, Burlington & Quincy R.R. to 26th St.; then north and east through the Brookdale residential section and the Moila Golf course to end at Frederick Ave. The distance paralleling the railroad, 2,747 ft., will have to be protected with steel sheet-piling to hold the railroad embankment. Also in this section there are two places, 1,000 ft. long in one place and 600 ft. long in another, where the new sewer replaces the present sewer. These two sections must be constructed in the same place as the present sewer which carries the flow of Patee Creek and the entire flow must be handled during construction. The size of the sewer varies from 13 ft. at the lower end to 8 ft. at the upper end and is what is known as the Louisville semi-elliptical section. The concrete varies from 2.45 cu.yd. with 552 ft. steel per linear foot for the 13-ft. section, to 0.9 cu.yd. concrete and 188 ft. steel per linear foot for the 8-ft. section.

There are three junction chambers from its beginning at 19th St. to the edge of the Moila Golf Course, a distance of about 7,000 ft., the new sewer either parallels or replaces the present Brookdale Main Sewer. All connections cut by the new sewer must be connected to it. The cut varies from 15 to 23 ft. in a material that varies from black loam to a heavy blue clay that is

wet. The ground water averages about ten feet below the surface of the ground. The first 7,000 ft. of the sewer runs through an industrial and residential section of the City, the last 2,500 ft. being through a golf course and cultivated ground.

The construction of this sewer is necessitated by the fact that the present main sewer is inadequate along the sections to be replaced. The section from 19th St. along Mitchell Ave. to the river is either round or egg-shaped, constructed of either brick or concrete and is in fair condition. A contract has been let to The Gunite Construction Co., Kansas City, Missouri, for the repair of this sewer for a distance of 5,200 ft. at $6 per foot.

The new sewer extends entirely through the Brookdale section of the city and will have ample inlets to catch the flood waters from the paved areas as fast as they reach the sewer. The heavy rain in June 1925 caused considerable damage to this section of the city, one industrial firm suffered a loss amounting to $172,000. The heaviest rainfall on record shows 2.55 in. in 80 minutes on June 24, 1924, and 6.2 in. in 275 minutes on June 3, 1925. The maximum intensity of rainfall recorded was at the rate of 5 in. per hour for a five minute period; this total rain averaged 2.97 in. for sixty minutes. The run-off at the river end of this sewer is estimated at 3,000 cu.ft. per second, taking care of an area of 133 acres. Velocity in this sewer varies from 17 to 20.1 ft. per second. The open area north of the north end of the sewer is 50 acres of cultivated ground and pasture. As stated before, the area around the south end of the sewer is 60 to 70 per cent paved and roofed. The Weather Bureau in this city computes 146 working days as an average per year, exclusive of Sundays and holidays. The work is to be completed in 300 working days or approximately Oct. 1, 1928.

The contractor has started work, using a Northwest Clam Shell and Blaw-Knox steel forms. He expects to complete about 25 ft. of concrete per day with this crew and later on will add another outfit.

Materials used in this job are figured at the following prices: cement, f.o.b. cars, nearest side track to work $2.19 per bbl., net; crushed stone, $2.05 per ton f.o.b. cars, or $2.50 per ton delivered on the job; sand, 80c. per ton at the plant with approximately 40c. per ton haul, and 8c. per ton discount for cash; reinforcing steel, 4½c. per lb. delivered on the job.

The lowest eight and highest bidders, together with their unit prices, are as follows: (A) A. A. Davis Co., Kansas City; (B) The Whitmire Construction Co., North Kansas City; (C) Moss; (D) Floyd-Shoffner & Co.; (E) Dobson & Humphreys; (F) Torson; (G) Judson; (H) Reed & Wheelock; (I) Patterson.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Waterworks engineers and superintendents prefer to use Leadite for joints—*It assures them that the pipe line will be completed and a revenue producer well within the time allowance.*

THE speed and simplicity of use of Leadite is a big factor in rapidly expanding communities.

This illustration shown here is a scene from an installation where Leadite was used with c. i. bell and spigot pipe.

These lines are in one of the fastest growing cities in the South. The speed of Leadite jointing makes it possible to lay pipe fast enough to keep up with the new building and real estate expansion.

In addition, Leadite joints are permanent. For over 30 years Leadite has been tested and used under all pipe laying conditions and has proven completely satisfactory.

The saving of labor time and advantages of using Leadite produce a saving of over 75% of the cost of making the joints.

Benefit by the experience of thousands of engineers, superintendents and contractors who have used Leadite.

QUESTION	ANSWER
1—What is *High-Early-Strength* Universal Concrete?	Concrete with a 3-*day* strength equal to the 28-*day* strength of ordinary concrete.
2—Are special materials and equipment needed?	No. It is made with the *usual* materials, *usual* labor, *usual* equipment and standard Universal cement, all applied according to thoroly tested methods.
3—What is its chief advantage?	Saves time! Concrete for foundations, buildings, sidewalks, pavements and improvements of all kinds is made ready for use in 3 *days* instead of 3 *weeks*.
4—Is there any additional important advantage?	Yes. Such concrete not only has a higher *early* strength, but also a greater *ultimate* strength and therefore is *permanently* better and stronger than ordinary concrete. (See diagram.)
5—Is its use restricted to certain kinds of jobs?	No. Because it may be made as workable as desired, *High-Early-Strength* Universal Concrete is used for any and all kinds of concrete work.
6—Has *High-Early-Strength* Universal Concrete been fully tested?	Yes. Thousands of laboratory tests, years of experiment and hundreds of actual jobs prove the value of *High-Early-Strength* Universal Concrete.
7—What other advantages does *High-Early-Strength* Universal Concrete offer?	It is unnecessary to stock extra brand of material as *High-Early-Strength* concrete is obtained with the *usual* materials, *usual* labor, *usual* equipment and the same quality Universal cement as used for ordinary construction.
8—Where can I get detailed information on *High-Early-Strength* Universal Concrete?	Full details for use on any concrete work will be sent promptly on receipt of the coupon below.

Hidden Values

Really Make Your Shovel or Crane

Like your automobile or davenport at home, it's the better materials down inside and the careful attention to every detail of design and workmanship that puts real value into a shovel or crane.

A half century's experience in building equipment to the highest standards is Industrial Brownhoist's pledge to you of value. Without it, we could not have produced the many thousand machines now in operation—nor could we offer you by far the most complete line of similar equipment ever built by one maker.

Handling costs are often the dividing line between profit and loss on many jobs. If there is a doubt in your mind as to the economy of your present methods, one of our sales engineers could be of help. May he call?

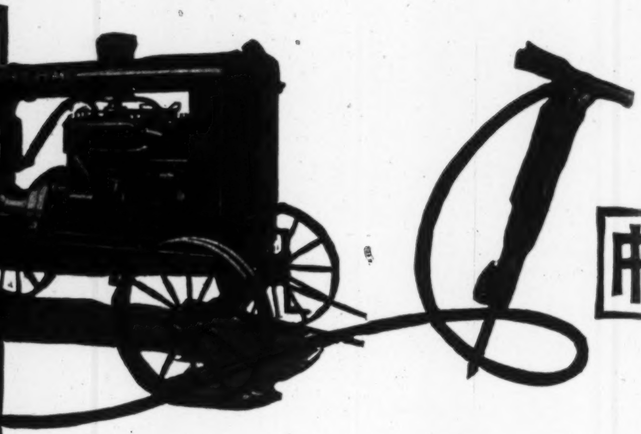
The I-R Paving Breaker will do the work of 15 men with hand sledges and steels.



Time and labor savers—the Ingersoll-Rand Portable Compressor and Paving Breaker.

This Outfit Paid for Itself in Two Weeks' Time

A WELL-KNOWN public utility company recently undertook a job that meant breaking out a strip of concrete paving and sidewalk almost a mile long. This figure must actually be doubled, since both sides of the street were torn up.

Two I-R Paving Breakers and a Type 20 Portable Compressor were rushed into service. In a little more than two weeks (8 hours per day), the demolition work was completely finished and the outfit moved along to another job.

The superintendent of the company, who was in constant touch with operations, states that the compressor and Paving Breakers paid for themselves on this one job alone.

You can make these savings, too. There is a compressor and a mounting for every type of work, and a complete line of air-operated, labor-saving tools. Upon request we shall be glad to send you full and authentic data showing how this equipment is reducing costs on other jobs in the field.

Keen Competition for Interesting Supplementary Sewer Contract in New Jersey

Section IV of the supplementary joint trunk sewer being constructed in Union and Essex Counties, N. J., 4 mi. long and of pre-cast concrete 30- to 42-in., has just been awarded for $209,380.10.

In general the supplementary sewer (20 mi. and 12- to 81-in.) parallels an existing sewer built in 1903. Its purpose is to supplement the capacity of the old one, so that the combined capacity will meet the needs of the tributary area of the following municipalities until 1950: City of East Orange; Township of Hillside; Town of Irvington; Township of Maplewood; Township of Millburn; City of Newark; Borough of Roselle Park; Village of South Orange; City of Summit; Township of Union and Town of West Orange; Union and Essex Counties.

The supplementary sewer is designed to carry 100,000,000 gal. of sewage per day, with the sewer running 0.7 full, which capacity is regarded as sufficient for a population of 350,000. The point of discharge is in the Arthur Kill near Elizabeth, N. J.

In general the trunk sewer consists of a main stem, extending from Summit southwesterly through Elizabeth to the outlet, and two branches. One branch runs northeasterly through Irvington toward East Orange and Newark, and the other northeasterly through Maplewood and South Orange to West Orange.

The construction of the supplementary sewer is divided into five separate sections. Section V, the branch through Irvington to East Orange and Newark, has been under construction since July, 1927. Section III, that portion of the main stem which connects Sections IV and V has been under construction since August, 1927.

SPECIAL FEATURES OF SECTION IV THAT AFFECT COST

Section IV, located in the valley of the East Branch of the Rahway River, has several features that are interesting because of their effect on construction cost. One of these is the location of the sewer with respect to the river. For considerable part of its length, it is close to the river, below the river bed, and crosses under it at three different places.

Another feature is the construction of the sewer through a golf course in Maplewood. In order to secure a right-of-way from the golf club it was necessary to incorporate in the specifications the most stringent requirements as to the handling of the work during construction, and the restoration of the golf course after the sewer was finished. One of these requirements was that the work should be done during the winter months, when it would interfere least with the use of the course.

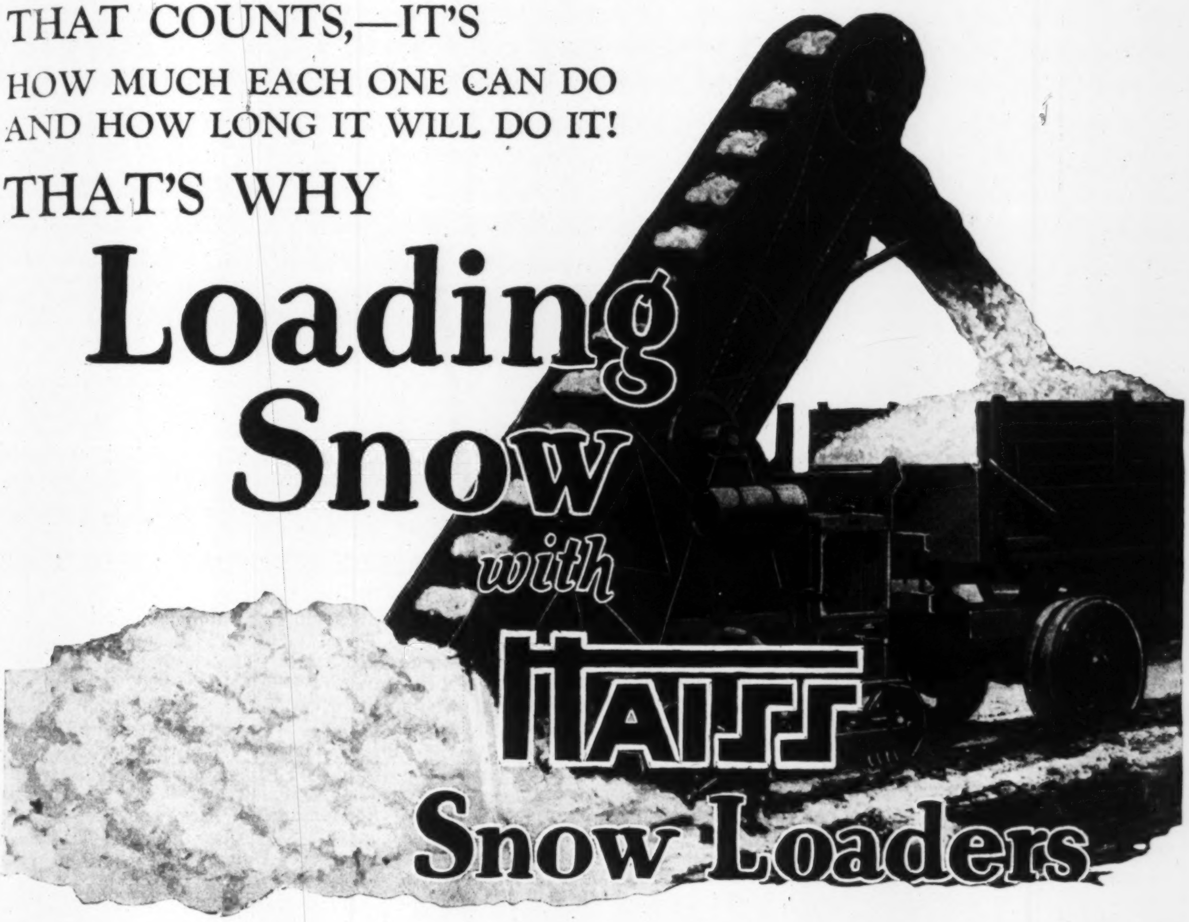
IT ISN'T THE NUMBER OF LOADERS THAT COUNTS,—IT'S

HOW MUCH EACH ONE CAN DO
AND HOW LONG IT WILL DO IT!

THAT'S WHY



Loading Snow with HAISS Snow Loaders

IS SO MUCH FASTER AND MORE CERTAIN!

TRACTION — DIGGING POWER — CAPACITY—You must have all three for successful snow loading. And for practical economy you must have a machine of low upkeep.

TRACTION! DIGGING POWER! A Haiss Snow Loader doesn't shimmy at the snow pile. Its balanced weight — all massive strength—is put on sure-footed creeper treads that hold their ground and make the revolving propellers cut, dig, and chop into the toughest snowbank in the city.

CAPACITY! And a Haiss Snow Loader, with its slow speed, continuous crowding, never jumps away from the truck it's loading. The HAISS Self-Feeding Propellers will drive an enormous amount of snow right into the digging teeth of the big, high conveyor flights. THAT MEANS MORE TRUCK LOADS PER HOUR!

LOW UPKEEP! No flimsy, wabbly plaything, this Haiss Snow Loader, it's a "HE-MAN" machine that will load upward of 10 yards of snow per minute and keep at it all day long. Yet it's as easy to run as an automobile.

THAT MEANS FULL LOADS IN LESS TIME!

It will pay you to investigate the Haiss Snow Loader—the difference is obvious enough to make you marvel at its ability—even if you "know" snow loaders.

(Continued from page 306)

A third item which would be reflected materially in the cost of the work was the location of the supplementary joint trunk sewer with respect to the existing one. For about 80 per cent of the length of the new sewer, it is parallel to the old one, with from 9 to 12 ft. between the center lines of the two sewers. Moreover, the bottom of the new sewer is about one foot below that of the old one.

COMPARISON OF BIDS

That there was keen competition among the contractors for this work is evidenced by the fact that fifteen proposals were received, and that the spread between the lowest and eighth from lowest was only 24 per cent. A comparison of the bids submitted shows the following relationship:

Bid	Amount	Per Cent of Low Bid
Low bid	$209,380	100
Average of lowest five bids	221,945	106
Average of the 15 bids	271,620	130
High bid .. .	379,975	180

By class A rock excavation in the tabulation of bids is meant rock which can only be removed by blasting or other method of similar difficulty and expense. Class B rock excavation includes rock more easily removed and masonry. It is expected that, of the total excavation for Section IV, about 4 per cent will be rock, 11 per cent quicksand and remaining 85 per cent ordinary earth.

The sewers are to be reinforced concrete pipe, constructed of class A concrete of the proportion 1:1½:2½. The purpose of this rich mix was to secure a more impervious and durable concrete for the sewer. As a further precaution, the pipe is to be lined with a bituminous coating (Barrett's Protector or equal) in order to protect the concrete from the effect of the acids in the sewer gases.

The classes of concrete listed in the tabulation of bids are: B 1:2:4; C 1:3:5; D 1:3:6.

METHOD OF CONSTRUCTION

It is the plan of the Paulsen Construction Corp., New York, to whom the contract was awarded, to pursue the work right through the winter.

A portion of the work is through open territory, in which it is expected that frost will appear first and become deepest. Part of this is through the golf course. The contractor will undertake this portion at once so as to have it completed before severe weather arrives. Along another portion there is a growth of underbrush and small trees. Here, it is expected, the first snowfall that blankets the ground will be kept in place by the underbrush and keep the frost from striking very deeply into the ground. So the contractor will do this portion during the more severe winter months, when unable to work on the rest of the line.

The bidders are (A) Paulsen Construction Corp., 21 East 40th St., New York; (B) Pizzimenti Bros., 154 Madison Pl., Ridgewood; (C) R. F. Relly Contracting Co., 1459 Bushkill St., Easton, Pa.; (D) J. Cestone, 5 Cloverhill Pl., Montclair, $290,393; Pittsburgh Foundation Co., Keystone Bldg., Pittsburgh, $296,970; D. W. Davis & Sons, 19 Union St., Kingston, Pa., $306,882; Rosoff Bros., Inc., 1014 Gates Ave., Brooklyn, N. Y., $375,863. The unit bids of the eight lowest and highest bidders are given in the table on the preceding page.

Big Dalton Dam, Los Angeles County; 26,000 Cu.Yd. Excavation; 38,270 Cu.Yd. Concrete; 6,000 Tons Reinforcing

Ten contractors submitted bids ranging from $381,194 to $532,005, or 40 per cent, for constructing a reinforced concrete dam on Big Dalton Creek, Los Angeles Flood Control District. Double wall buttress multiple arch type, maximum height 165 ft., approximate length at crest 500 ft. County will furnish steel and cement.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Only 51 days between the decision to build an emergency water works plant - - *and the finished job!*

- - the speed with which Leadite jointing can be accomplished contributed to this remarkable feat.

THE line illustrated here is 26,000 ft. of 12" pipe with LEADITE joints.

Owing to the emergency which arose in the city for which the installation was made no trenching could be attempted.

The line lies throughout its entire length on the surface of the ground without any bracing except at the bends.

After completion the line was tested to 260 lbs. pump pressure.

It is now under constant pump working pressure of 230 lbs. For over 30 years now, LEADITE has demonstrated by test and experience that it is absolutely permanent and secure.

Leadite is self-caulking and is so simple to use that the method of using it can be taught to even the most inexperienced help in a very short time.

Added to its speed and ease of use—Leadite saves at least 75% on account of saving in material and labor.

Advantages of Independent Concrete Pipe Sewers

from the ENGINEER'S Point of View

Permanency and economy of concrete pipe sewers have been proved by long and successful service.

Pipe units are built locally—
The special pipe plant becomes a "Home industry." Uses local labor and materials wherever possible. Benefits local business.

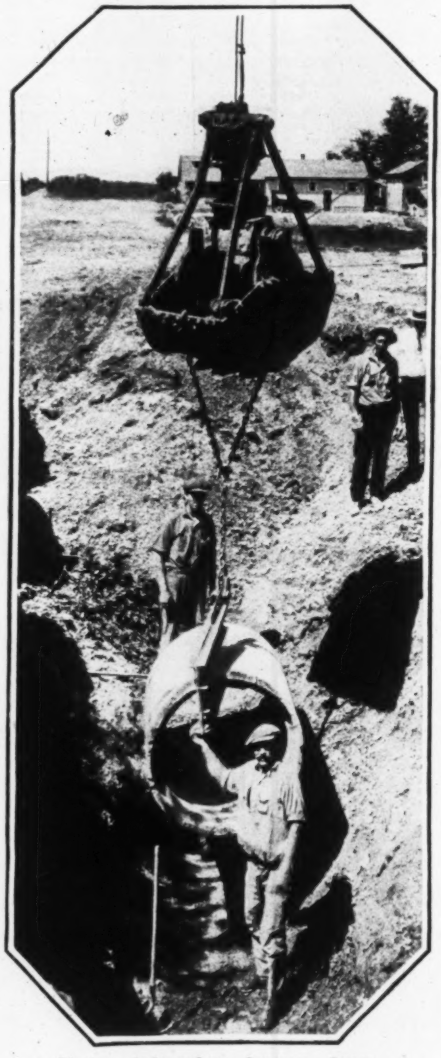
Inspection is facilitated—Materials, workmanship and pipe units are tested and inspected at every stage of construction.

Pipe is low in cost—due to the economies of "Independent" advanced methods of manufacturing concrete pipe.

Entire joint is visible for inspection, until trench is backfilled.

Completed sewer is strong, tight, permanent and efficient. Provides free flow and maximum capacity. Endures for generations, with little or no upkeep.

Let us send you engineering data.



Placing Independent Concrete Sewer Pipe at Lansing, Mich. One machine does all digging, laying and back-filling.

from the CONTRACTOR'S Point of View

Building the pipe locally—on the job or nearby, assures prompt delivery of pipe along the line of work, ready for the construction crew to lay.

"Recessed" Joints make the pipe easier to lay. Lower half of joint is sealed inside the sewer—upper half of joint is filled on top of pipe.

Pipe can be laid easily, and speedily even where water, caving soil, or other difficult trench conditions are encountered.

Laying can follow excavating closely, and back-fill can be made immediately after pipe joints are sealed, if required. Often one machine can do all three operations—digging, laying and backfilling.

Finished sewer means a profitable job, and a satisfied "customer."

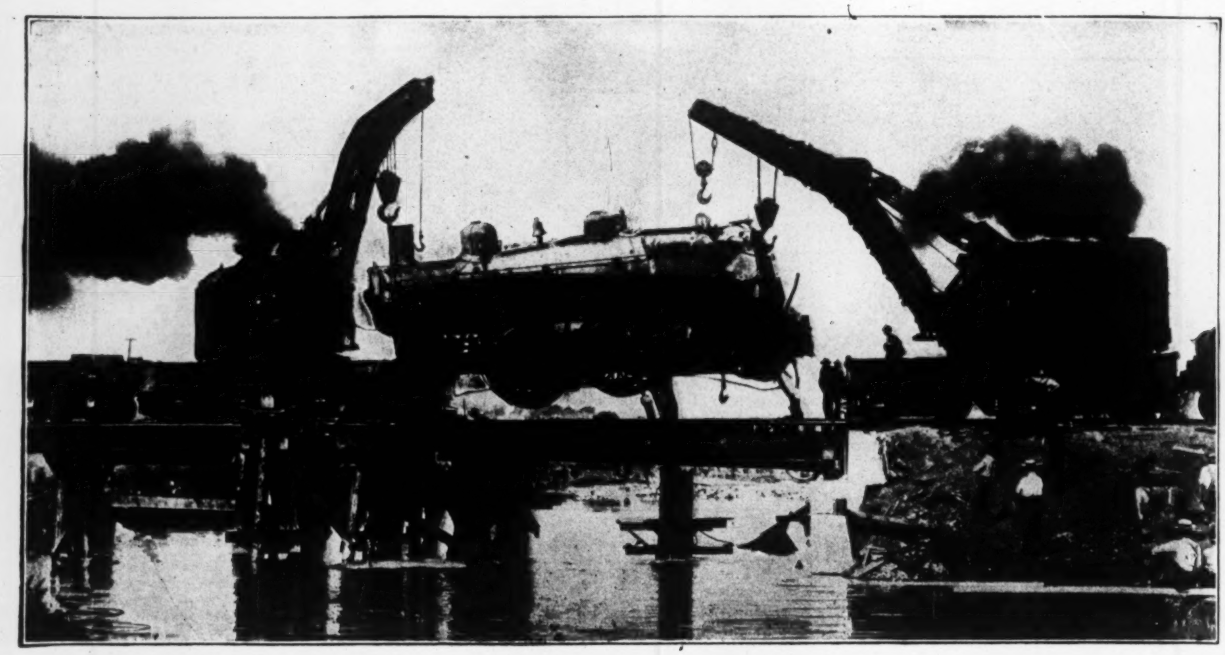
Industrial Brownhoist Cranes Set the Standard ~ ~ ~ ~ ~ ~ For Speed, Length of Service ~ ~ ~ And Economy ~ ~ ~



Industrial and Brownhoist were the originators of the locomotive crane industry in this country. Today there are thousands of these cranes in use—far more than any other make. ¶The advantages of mere numbers are unimportant, but the knowledge gained from long experience can be obtained in no other way. ¶Today Industrial Brownhoist offers you by far the most complete line of similar equipment ever manufactured by one company; locomotive cranes ranging from 7½ to 60 tons, wrecking cranes from 75 to 200 tons, and shovels of ½ to 1¼ yards capacity. ¶Getting the right crane or shovel, the one best size and type for your work, is your best guarantee of satisfactory, economical handling. And Industrial Brownhoist is best qualified to furnish this for you.

Analysis of Bids on Small Sewer Job at Rolla, Mo.

Four bids were received on September 2, 1927, for sewers and sewage disposal plant at Rolla, Missouri, and the contract was awarded to Joseph O'Neall of Leavenworth, Kan., at $46,862.45. Difference between high and low was $1,528.95 or approximately 3.2 per cent. Practically all of the work is in unpaved streets.

Section I of this contract covers the construction of sanitary sewers of vitrified pipe, with asphaltic joints, in trenches from 6 to 14 ft.

Borings for the work indicate very litle solid rock, but underlying the top soil which is but two or three feet in thickness is a mixture of cemented gravel known as hardpan but which is more nearly like the "caliche" of the arid parts of the country although not so closely cemented or so hard. Trenching machine operation although slow is possible and shooting is not necessary.

Section II covers the construction of an ejector station to house duplicate 50 g.p.m. sewage ejectors together with a compressed air line and 4-in. c.i. force main. The ejector station includes 34 cu.yd. concrete, and a brick superstructure in addition to the items given in the tabulation.

Section III covers the construction of a sewage disposal plant to consist of an Imhoff tank and sludge drying beds and includes 185 cu.yd. of reinforced concrete in addition to the items given.

The average cost, considering all four bids, of furnishing and laying the 8-in. and 12-in. pipe was, respectively, $0.45 and $0.72 a foot while the trenching considering (0-6) and (6-8) foot depths which constituted a greater portion of the work averaged for all four bids $0.50 and $0.58, respectively. It will be noted that on the main and outfall sewers the O'Neall Construction Co. was 2 per cent higher than the lowest bidder on that portion of the work and on the whole work there was a difference of 2 per cent.

Plans and specifications for this work were prepared by Black & Veatch, consulting engineers, Kansas City, and the work is being constructed under their supervision. Paul Hausmann, Jr., is resident engineer.

TRADE "LEADITE" MARK

Registered U. S. Pat. Office

Eliminating Repairs and Maintenance Costs

TRENTON WATER WORKS, Trenton, N. J., has been using Leadite for making joints in c. i. bell and spigot water mains for a great many years with entire satisfaction.

They have laid nearly 75 miles of c. i. pipe of various sizes with Leadite joints.

Trenton has very good paved streets and they have never had to dig up a Leadite joint for repairs during all the time they have been using Leadite. They consider this excellent performance for Leadite joints.

They find the use of Leadite has reduced to a minimum repairs and maintenance costs.

Trenton Water Works has always found Leadite joints efficient and economical.

They keep a check on their distribution svstem by water waste surveys.

During the severe winter of 1917-18 Trenton Water Works had over 2000 frozen services. Many of these services were connected to mains laid with Leadite joints. They had no difficulty in thawing, with electrical apparatus, services connected with mains which were laid with Leadite joints.

Mr. Alvin Bugbee is Superintendent of the Trenton Water Works.

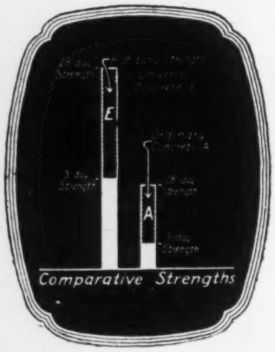
High Strength and Early Use Gained

thru use of High-Early-Strength *Universal Concrete*



High-Early-Strength Universal Concrete is made according to approved methods with the usual materials, usual labor, usual equipment, and usual Universal cement. At 3 *days* its strength is equal to the strength of ordinary concrete at 28 *days*, and in addition it also has a higher *ultimate* strength, and therefore is *permanently* better and stronger concrete. For details, send in the accompanying coupon.

In building a new floor in its car barn at Wausau, Wis., the Wisconsin Valley Electric Co. used *High-Early-Strength* Universal Concrete. Here are the advantages gained:

Specifications called for a compressive strength of 2000 lbs. per square inch before putting the floor to use. Concrete as ordinarily placed develops this strength in 28 *days*. The *High-Early-Strength* Universal Concrete tested 1996 lbs. at 3 *days* — a saving of 25 days.

As *High-Early-Strength* Universal Concrete has a much higher *ultimate* strength in addition to a higher *early* strength, the company secured a *permanently* better and stronger pavement [see diagram].

High-Early-Strength Concrete is made without use of special materials at premium prices. It is made according to approved methods with the usual labor, usual materials, usual equipment and usual Universal cement.

High-Early-Strength Universal Concrete may be used on all types of jobs. For full details, send in the accompanying coupon.

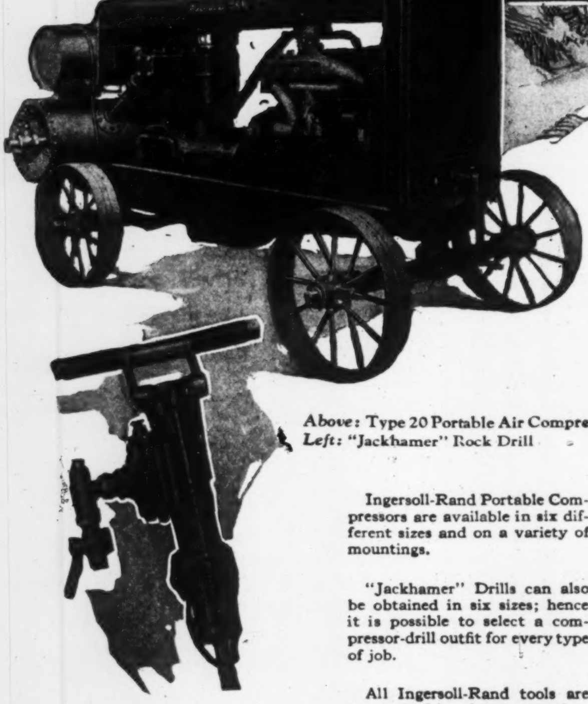
Ingersoll-Rand Portable Compressors and Rock Drills on road-building work



Above: Type 20 Portable Air Compressor
Left: "Jackhamer" Rock Drill

Ingersoll-Rand Portable Compressors are available in six different sizes and on a variety of mountings.

"Jackhamer" Drills can also be obtained in six sizes; hence it is possible to select a compressor-drill outfit for every type of job.

All Ingersoll-Rand tools are economical in air consumption. Various combinations can be operated efficiently by each of the six portable compressors.

What Is Your Road-Building Program?

Use Compressed Air to Do More Work for the Same Money, or the Same Work for Less Money

By using Ingersoll-Rand Portable Compressors and "Jackhamer" Rock Drills, many contractors have materially reduced their road-building costs.

Over 100,000 people have requested copies of our new book, "100 and 1 Ways to Save Money With Portable Air Compressors." This publication contains 140 pages of illustrations and authentic cost data, as well as numerous comparisons with hand work.

$30,000,000 SAVED!

THE American Institute of Steel Construction has already contributed to modernizing the building codes of more than a hundred cities in this country and Canada. This has meant an estimated saving to builders, owners and taxpayers of more than $30,000,000 annually. The Institute enlisted the aid of America's ablest engineering talent in developing its Standard Specification for the design, fabrication and erection of structural steel for buildings. . . . This Specification is endorsed by such bodies as the A. S. C. E., the New York Building Congress, and the Pacific Coast Building Officials Conference. It supplements a Code of Standard Practice designed to obviate misunderstandings between the buyer and seller of structural steel. Send for copies of the Standard Specification and Code of Practice. There is no obligation. We will also send the valuable fact-book, "STEEL NEVER FAILS."

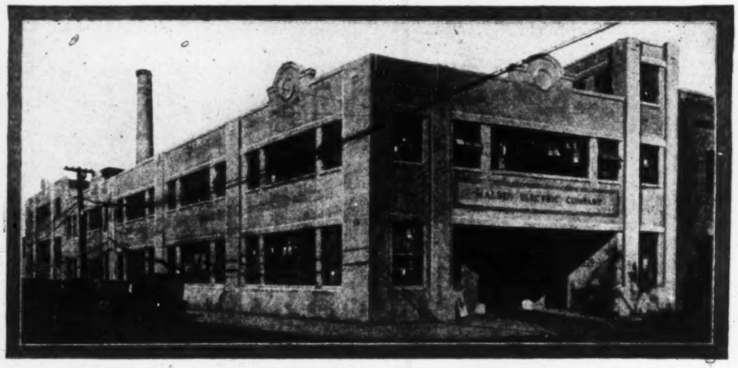
GARAGING TRUCK FLEETS

presents a vast opportunity



The 115 car Garage of the Malden Electric Company, Malden, Mass., erected to house their fleet of trucks and service cars.

Designed by
CHARLES H. TERREY & Co.
Architects
Boston, Mass.

BECAUSE convenient location and high land values go hand in hand, such GARAGES must be multi-floor buildings. Ramps make it inexpensive to utilize upper floors for garage purposes—and d'Humy Motoramps (patented) so economize on floor space as to make the car berth layout most efficient.

With housing conditions thus favorable, there is every reason for garaging fleets near their loading point. Consider the possibilities among the fleet owners of your own city. Can they not be interested in a modern, multi-floor Garage?

Are you acquainted with the services which this Company renders to architects? Our brochure "Building Garages for Profitable Operation" both describes d'Humy Motoramps and defines the scope of assistance to you. Ask for a copy.

Pile Your Winter Hauling Worries On Speed Wagons

When you need trucks to buck the strain of winter hauling and get work done *on time*, regardless of weather or rough going, you're ready for new Master Speed Wagons.

For stubborn pulling power and high speed performance under adverse conditions, the six-cylinder engine of the new Master Speed Wagon cannot be surpassed today. A single-plate clutch and double reduction steering mean easier shifting and turning in narrow quarters. Drivers are kept at the peak of efficiency in warm, comfortable cabs. Superior chassis strength and stamina defy the jolts and jars that shorten the life of ordinary trucks.

Salt Creek Intercepting Sewer, Chicago, Ill.

Seven contractors submitted bids on September 22 for Contract 2 of the Salt Creek Intercepting Sewer, Chicago. The low was $1,864,720, which is 20 per cent under the high. Work consists of building 30,000 ft. of 3 ft. 6 in. to 7 ft. sewer in earth and in rock and 4,500 ft. of 12- to 27-in. pipe sewer. Includes furnishing and placing concrete, reinforcing steel, iron castings, earth and rock excavation, tunneling, backfilling, and disposal of excess material.

The tabulation gives unit prices on items 1 to 11, and 39 to 42. Items 12 to 28 are for lump sum operations, such as railroad and river crossings and drop connections. The remaining items (43 to 49) are for additional work for which the Sanitary District of Chicago has set the following prices:
